XX Novel high molecular weight Dermatophagoides nucleic acid polypeptides
PT used to modify an animal's hypersensitivity to mite allergens.

XX Claim 3; Page 69; 154pp; English.

CC Sequences AAVS2510-Y5252 represent proteolytic fragments of
CC Dermatophagoides farinae high molecular weight mite allergen protein (HMW-
CC map) composition. The HMW-map composition was isolated from a D. farinae
CC homogenate by gel filtration, with each fraction being analysed for the
CC presence of proteins that bound to IGE present in mite-allergic dog
CC antiserum. The HMW-map composition comprises mapA (a 109 kD protein) and
CC mapB (98 kD). Mite allergenic proteins and peptides, and nucleic acids
CC encoding them, may be used in therapeutic compositions to modify an
CC animal's hypersensitivity reaction to mite allergens. Animals that may be
CC treated include mammals and birds, especially felines, canines, equines,
CC humans, other pets, and work or domestic animals. The proteins or
CC fragments may also be used to diagnose allergies via a skin test. The
CC proteins and peptides can also be used to raise antibodies, which have a
CC variety of potential uses. For example, they can be used as vaccines to
CC passively immunise animals against dust mite hypersensitivity, as
CC positive controls in test kits and as tools to recover desired dust mite
CC allergens from a mixture of proteins

XX New mite allergenic protein isolated from Dermatophagoides, designated
XX Der HMW-map protein, useful as a vaccine for treating mite allergy.

XX Claim 12; Page 70; 161pp; English.

XX The invention relates to an isolated mite allergenic protein of
XX Dermatophagoides, designated Der HMW-map protein, and its related nucleic
XX acid. The Der HMW-map protein is useful for eliciting an immune response
XX against Der HMW-map protein. The protein or a reagent comprising a non-
XX proteinaceous epitope is useful for identifying an animal (e.g., dog,
XX cat) susceptible to or having an allergic response to a mite. A
XX therapeutic composition is useful for desensitising a host animal to an
XX allergic response to a mite. The DNA and protein can be used in the
XX detection of anti-Der HMW-map antibodies in animal fluids, and inhibition
XX of immunoglobulin (Ig)E or Der HMW-map protein activity associated with a
XX disease. Antibodies that bind to Der HMW-map are useful for inhibiting
XX binding of proteins to IGE, to prevent immunocomplex formation, thus
XX reducing hypersensitivity responses to mite allergens, and as vaccines
XX against mite allergen hypersensitivity. Sequences AAU96314-AAU96342
XX represent Der HMW-map polypeptides of the invention

PT	Non-human animal sensitized to an antigen, useful as an animal model for studying allergic reactions to allergens, such as those in food and in the environment.
PT	
XX	
PS	Example 5; Page 62; 124pp; English.
XX	
CC	The present invention describes an animal model which can be used for studying allergic reactions to allergens. The animal is sensitized to a selected antigen by administering the antigen itself or a nucleic acid encoding the antigen, where preferably the antigen is an anaphylactic antigen. The sensitized animal can then be used to screen for compounds which may help to prevent, ameliorate, or cure allergic conditions in humans. The animal model can be used for studying allergic reactions to allergens, such as those in food (peanuts, fruit, berry, nut, bean, milk, dairy products), or in the environment (weed pollen, grass pollen, tree pollen, mite, animal, animal dander, fungal, and insect antigens).
CC	AA833478 to AA833601 represent sequences which are used in examples from the present invention to specifically examine the peanut allergy, and the peanut anaphylactic antigens Ara h 1 to 3. (Updated on 12-SEP-2003 to standardise OS field)

PT	Immunostimulatory composition for treating or preventing an allergic reaction leading to conditions such as asthma or anaphylaxis, comprises oligonucleotides with unmethylated Cpg sequences and antigens derived from allergens.
PT	
XX	

PS Example 3; Page 67; 103pp; English.

XX The invention relates to an immunomodulatory composition comprising a Cpg

CC oligonucleotide of the sequence 5' purine-purine-C-G-pyrimidine-

CC pyrimidine 3', where C and G are unmodified, and at least one antigen

CC derived from an allergen that causes anaphylaxis. The composition is

CC useful for treating allergy in an individual. The composition prevents or

CC modulates an individual's immune response to an antigen which leads to

CC asthma and/or anaphylaxis. Individuals susceptible to anaphylactic shock

CC upon exposure to allergens from foods (e.g., peanut), venom or rubber may

CC be treated using the composition. Sequences ABB23098-B23125 represent a

CC series of 20-residue peptides from wild-type peanut Ara h 2 protein used

CC in an exemplification of the invention

PT Antigenic fragments useful for reducing anaphylactic risk and reducing

PT the severity and/or number of allergic symptoms in individuals sensitive

PT to antigens, have reduced ability to bind Immunoglobulin E.

XX

XX

PS Claim 40; Page 52; 100pp; English.

XX

CC The sequence represents the amino acid sequence of native anaphylactic

CC antigen Ara h 2 peptide #10. Ara h 2 is an anaphylactic antigen (A) which

CC was used to design antigenic peptides having a reduced ability to bind

CC IGE as compared with the intact (A), or having a sequence substantially

CC identical to a portion of sequence of an antigen that includes at least

CC one IGE binding site, where at least one IGE binding site of the peptide

CC is altered. The antigenic peptides are used in a composition which is

CC useful for reducing risk or severity of allergic reaction to an antigen.

CC This is done by identifying an individual at risk of allergic reaction to

CC an antigen by identifying prior display of allergic symptoms when exposed

CC to the antigen, or a familial relationship with an individual who

CC previously displayed allergic symptoms when exposed to the antigen.

CC Following this an antigen-specific IGE present on one or more mast cells

CC or basophils in the individual's serum is identified. The individual is

CC then contacted with a peptide corresponding to a portion of the antigen,

CC which is selected, formulated, and delivered so that binding of the

CC peptide to antigen-specific IGE is reduced as compared with IGE binding

CC of intact antigen. The composition is also useful for treating and

CC preventing allergic reactions

PT Preventing allergic response against antigens, e.g. food and

PT environmental allergens such as peanut allergen or grass pollen, latex or

PT drug, comprises administering agent, e.g. a peptide, that blocks antigen

PT binding sites on offending IGE.

XX

XX

PS Example 2; Page 46; 76pp; English.

XX

CC The sequence represents the amino acid sequence of anaphylactic peanut

CC antigen Ara h 2, native peptide #10. The peptide is used in active or

CC passive desensitisation of an individual to an antigen; for alleviating

CC or preventing allergic reactions and for decreasing the risk of allergic

CC reactions during immunotherapy or rush immunotherapy, anaphylaxis and

CC asthma. The antigen may be a food allergen (e.g., peanut or milk

CC allergen), shellfish allergen, environmental allergen (e.g. grass pollen

CC or tree pollen), latex, drug, pollen, ovalbumin, an insect venom antigen

CC or predominantly linear epitopes. The protein is useful for protecting an

CC individual against subsequent inadvertent or intentional exposure to

CC antigen, e.g. receiving blocking agent before eating a chocolate bar

CC which may inadvertently contain peanut components or before eating foods
CC prepared using peanut oil. Administration of the blocking agent does not
CC result in cross-linking of anti-antigenic IgE. After exposure to the
CC agent, the individual's antigen sensitivity is at least temporarily
CC reduced. Only those IgE molecules that bind the offending antigen and
CC contribute to the risk of an allergic response are blocked

XX Alkaline protease nucleic acid coding sequence - used to develop prods
PT for use in detergents and for the recombinant expression of
XX polypeptide(s).

PS Example 6.2; Page 35; 67pp; English.

XX AAW24075-76 are peptide fragments of a protease, used to design
CC degenerate primers (AA185623-24) for the amplification of a 180 bp gene
CC fragment. The gene fragment can be used to isolate a full length gene
CC encoding the protease, which was isolated from Bacillus sp. PD498. The
CC protease has the properties: (a) a molecular weight of about 34 kd as
CC determined by SDS-PAGE; (b) pI of about 9.3; (c) pH optimum in the range
CC of pH 9-11 at about 25 degrees C and with casein as substrate; (d)
CC temperature optimum in the range of about 40-55 degrees C at a pH of
CC about 9.5 and with casein as substrate; and (e) obtainable from Bacillus
CC sp. Group I. This alkaline protease is useful in detergent compositions.
CC The promoter and signal sequences of the protease gene and its encoded
CC product, can be used for the recombinant expression of heterologous
CC polypeptides. In particular nucleic acid constructs and vectors for this
CC purpose are also claimed. NB. The specification is unclear as to the
CC numbering of the sequences in the sequence ID listing. (Updated on 25-MAR
CC -2003 to correct PI field.) (Updated on 16-OCT-2003 to standardise OS

XX
XX PT Vaccine containing caprine arthritis-encephalomyelitis virus immunogen -
XX PT used to generate immune response against CAEV that is cross-reactive with
XX PT human immunodeficiency virus.
XX PS Claim 4; Page 8; 71pp; English.
XX
XX CC This sequence represents a caprine arthritis encephalomyelitis virus
XX CC (CAEV) immunogen. This sequence, along with a carrier, can be used as a
XX CC vaccine of the invention. The immunogen is used to stimulate protective
XX CC immune responses against CAEV which, in humans, are cross-reactive with
XX CC human immunodeficiency virus (HIV-1), i.e. it protects against HIV-1
XX CC infection or reduces severity of existing infections. An immune response
XX CC can also be induced by exposure, particularly in vitro, of T- or B-
XX CC lymphocytes to the immunogen, followed by expansion of the stimulated
XX CC cells and return to the patient. Assays using CAEV specific antibodies
XX CC recognising this sequence are used for diagnosis, to screen blood for
XX CC contamination by CAEV and to monitor the effect of vaccination. CAEV-
XX CC based vaccines can protect against HIV without the risks attendant on
XX CC using HIV-based vaccines. The assays are simple, inexpensive and suitable
XX CC for large scale screening. (Updated on 17-OCT-2003 to standardise OS
XX CC field)

PT Identifying CD4+ human papillomavirus (HPV) epitopes or determining T-
PT cell epitope of HPV strain, useful in prophylactic/therapeutic vaccines,
PT by combining dendritic cells, CD4+ and/or CD8+ T-cells with pepset of
PT peptides from HPV.
XX
PS Claim 4; SEQ ID NO 82; 56pp; English.
XX
CC This invention relates to a novel method of identifying CD4+ human
CC papillomavirus (HPV) epitopes or determining a T-cell epitope of a HPV
CC strain. The method comprises combining a solution of differentiated
CC dendritic cells and naive CD4+ and/or CD8+ T-cells with a set of peptides
CC from the HPV (which comprises the T-cell epitope) and measuring T-cell
CC proliferation. The invention may be useful for the production of
CC compounds with an antiviral or cytostatic activity. The method or the
CC modified epitopes are useful in prophylactic and/or therapeutic vaccines,
CC as means for the development of HPV vaccines for the prevention of
CC infection with high-risk HPV strains, or as means for use in the development of
CC therapeutic vaccines against high-risk HPV types for use in the
CC prevention of the development of benign and/or malignant tumors in
CC infected individuals. The present sequence is that of a Human

CC papillomavirus-derived epitope peptide which was identified using the
CC method of the invention.

XX
PS Claim 1; SEQ ID NO 82; 56pp; English.
XX
XX
CC The invention relates to isolated human papillomavirus (HPV) epitopes
CC given as SEQ ID Nos 1-109 in the specification. The epitopes are CD4+ T-
CC cell epitopes in B6, E7 and E2 proteins isolated from various strains of
CC HPV. Also claimed are: a polynucleotide comprising one or more of the
CC nucleic acid sequences encoding an epitope of the invention, a vector
CC comprising the above polynucleotide, a polypeptide encoded by the above
CC polynucleotide, a cell comprising the above polynucleotide, a composition
CC comprising the above polypeptide, one or more peptide that has a HPV
CC epitope or one or more nucleic acid that encodes the HPV epitope, and a
CC vaccine composition comprising a HPV epitope or one or more nucleic acid
CC that encodes a HPV epitope. The HPV epitopes of the invention are useful
CC for producing a medicament for inducing an immune response (e.g. an
CC antibody-mediated response or cell-mediated response) directed against
CC one or more strain of HPV. The epitopes are useful in the development of
CC HPV vaccines (particularly multivalent vaccines) for the prevention of
CC infection with high-risk HPV strains. The HPV epitopes are useful in
CC prophylactic and therapeutic vaccines against HPV. The therapeutic
CC vaccines can be used to prevent the development of benign and/or
CC malignant tumors in HPV infected individuals. This sequence represents a
CC HPV epitope of the invention.

 PT New mite allergenic protein isolated from Dermatophagoides, designated
 PT Der HMW-map protein, useful as a vaccine for treating mite allergy.
 XX
 PS Claim 12; Page 71; 161pp; English.
 XX
 SQ The invention relates to an isolated mite allergenic protein of
 CC Dermatophagoides, designated Der HMW-map protein, and its related nucleic
 CC acid. The Der HMW-map protein is useful for eliciting an immune response
 CC against Der HMW-map protein. The protein or a reagent comprising a non-
 CC proteinaceous epitope is useful for identifying an animal (e.g., dog,
 CC cat) susceptible to or having an allergic response to a mite. A
 CC therapeutic composition is useful for desensitizing a host animal to an
 CC allergic response to a mite. The DNA and protein can be used in the
 CC detection of anti-Der HMW-map antibodies in animal fluids, and inhibition
 CC of immunoglobulin (Ig)E or Der HMW-map protein activity associated with a
 CC disease. Antibodies that bind to Der HMW-map are useful for inhibiting
 CC binding of proteins to IgE, to prevent immunocomplex formation, thus
 CC reducing hypersensitivity responses to mite allergens, and as vaccines
 CC against mite allergen hypersensitivity. Sequences AAU96314-AAU96342
 CC represent Der HMW-map polypeptides of the invention

 PT New complex between two interacting proteins in adipocyte cells, useful
 PT for identifying selected interacting domains that modulate protein
 PT interactions, or for preventing or treating metabolic disorders such as
 PT obesity or diabetes.
 XX
 PS Claim 6, Page 279, 382pp; English.
 XX
 CC The invention relates to a complex between two interacting proteins in
 CC adipocyte cells, given in the specification. The proteins are identified
 CC by selecting a bait protein from a known adipocyte marker and then
 CC performing a yeast 2-hybrid selection to isolate prey proteins encoded by
 CC members of an adipocyte cDNA library. The proteins are designated SID
 CC (RTM) (selected interacting domains) proteins. Also included are a
 CC polynucleotide encoding a polypeptide in the adipocyte cells, a
 CC recombinant host cell expressing at least one of the interacting
 CC polypeptides of the complex, selecting a modulating compound in adipocyte
 CC cells, a SID (RTM) polypeptide comprising any of the 738 amino acid
 CC sequences given in the specification (including its fragment or variant),
 CC a SID (RTM) polynucleotide comprising any of the 738 nucleotide sequences
 CC given in the specification (including its fragment or variant), a vector
 CC comprising the SID (RTM) polynucleotide, a recombinant host cell
 CC comprising the vector, a protein chip comprising the polypeptides and a
 CC record comprising all or part of the data, listed in the specification.
 CC The complex, polypeptides, polynucleotides and compounds are useful for
 CC preventing or treating metabolic disorders such as obesity or diabetes.
 CC The polynucleotides are useful as probes or primers. The complex is
 CC particularly useful for identifying selected interacting domains (SID
 CC (RTM)) for screening drugs that modulate the protein interaction, thus
 CC exhibiting the therapeutic effect. The present sequence represents a SID
 CC (prey) protein of the invention

 XX
 PT Non-human animal sensitized to an antigen, useful as an animal model for
 PT studying allergic reactions to allergens, such as those in food and in
 PT the environment.
 XX
 PS Example 5, Page 62, 124pp; English.
 XX
 CC The present invention describes an animal model which can be used for
 CC studying allergic reactions to allergens. The animal is sensitized to a
 CC selected antigen by administering the antigen itself or a nucleic acid
 CC encoding the antigen, where preferably the antigen is an anaphylactic
 CC antigen. The sensitized animal can then be used to screen for compounds
 CC which may help to prevent, ameliorate, or cure allergic conditions in
 CC humans. The animal model can be used for studying allergic reactions to
 CC allergens, such as those in food (peanuts, fruit, berry, nut, bean, milk,
 CC dairy products), or in the environment (weed pollen, grass pollen, tree
 CC pollen, mite, animal, animal dander, fungal, and insect antigens).
 CC AAB33478 to AAB33601 represent sequences which are used in examples from
 CC the present invention to specifically examine the peanut allergy, and the
 CC peanut anaphylactic antigens Ara h 1 to 3. (Updated on 12-SEP-2003 to
 CC standardise OS field)

XX
XX Immunostimulatory composition for treating or preventing an allergic
PT reaction leading to conditions such as asthma or anaphylaxis, comprises
PT oligonucleotides with unmethylated CpG sequences and antigens derived
PT from allergens.
XX
XX Example 3; Page 67; 103pp; English.
XX
XX The invention relates to an immunomodulatory composition comprising a CpG
CC oligonucleotide of the sequence 5' purine-purine-C-G-pyrimidine-
CC pyrimidine 3', where C and G are unmethylated, and at least one antigen
CC derived from an allergen that causes anaphylaxis. The composition is
CC useful for treating allergy in an individual. The composition prevents or
CC modulates an individual's immune response to an antigen which leads to
CC asthma and/or anaphylaxis. Individuals susceptible to anaphylactic shock
CC upon exposure to allergens from foods (e.g., peanut), venom or rubber may
CC be treated using the composition. Sequences AAB23098-B23125 represent a
CC series of 20-residue peptides from wild-type peanut Ara h 2 protein used
CC in an exemplification of the invention

XX
XX Antigenic fragments useful for reducing anaphylactic risk and reducing
PT the severity and/or number of allergic symptoms in individuals sensitive
PT to antigens, have reduced ability to bind Immunoglobulin E.
XX
XX Claim 40; Page 52; 100pp; English.
XX
XX The sequence represents the amino acid sequence of native anaphylactic
CC antigen Ara h 2 peptide #11. Ara h 2 is an anaphylactic antigen (A) which
CC was used to design antigenic peptides having a reduced ability to bind
CC IgE as compared with the intact (A), or having a sequence substantially
CC identical to a portion of sequence of an antigen that includes at least
CC one IgE binding site, where at least one IgE binding site of the peptide
CC is altered. The antigenic peptides are used in a composition which is
CC useful for reducing risk or severity of allergic reaction to an antigen.
CC This is done by identifying an individual at risk of allergic reaction to
CC an antigen by identifying prior display of allergic symptoms when exposed
CC to the antigen, or a familial relationship with an individual who
CC previously displayed allergic symptoms when exposed to the antigen.
CC Following this an antigen-specific IgE present on one or more mast cells
CC or basophils in the individual's serum is identified. The individual is
CC then contacted with a peptide corresponding to a portion of the antigen,
CC which is selected, formulated, and delivered so that binding of the
CC peptide to antigen-specific IgE is reduced as compared with IgE binding
CC of intact antigen. The composition is also useful for treating and
XX preventing allergic reactions

XX
XX Preventing allergic response against antigens, e.g. food and
PT environmental allergens such as peanut allergen or grass pollen, latex or

PT drug, comprises administering agent, e.g. a peptide, that blocks antigen
 binding sites on offending IGE.
 XX Example 2, Page 46, 76pp, English.
 CC The sequence represents the amino acid sequence of anaphylactic peanut
 antigen Ara h 2, native peptide #11. The peptide is used in active or
 passive desensitization of an individual to an antigen, for alleviating
 or preventing allergic reactions and for decreasing the risk of allergic
 reactions during immunotherapy or rush immunotherapy, anaphylaxis and
 asthma. The antigen may be a food allergen (e.g. peanut or milk
 allergen), shellfish allergen, environmental allergen (e.g. grass pollen
 or tree pollen), latex, drug, pollen, ovalbumin, an insect venom antigen
 or predominantly linear epitopes. The protein is useful for protecting an
 individual against subsequent inadvertent or intentional exposure to
 antigen, e.g. receiving blocking agent before eating a chocolate bar
 which may inadvertently contain peanut components or before eating foods
 prepared using peanut oil. Administration of the blocking agent does not
 result in cross-linking of anti-allergenic IGE. After exposure to the
 agent, the individual's antigen sensitivity is at least temporarily
 reduced. Only those IGE molecules that bind the offending antigen and
 contribute to the risk of an allergic response are blocked

 PT Inducing CD4+ T-cell response against target antigen by administering a
 PT composition comprising a source of CD4+ epitopes which is a non-
 PT replicating or replicating impaired recombinant poxvirus vector.
 XX
 PS Example 2, Page 33, 50pp, English.
 XX
 CC The present invention relates to a method of inducing a CD4+ T-cell

CC response against a target antigen, by administering two different
 CC compositions comprising a source of CD4+ T-cell epitope(s) of the target
 CC antigen, where the second composition further includes an epitope which
 CC is same as the epitope of the first composition, where the source of the
 CC epitopes for the compositions is a non-replicating or replicating
 CC impaired recombinant poxvirus vector. The methods are useful for inducing
 CC CD4+ T-cell immune responses against diseases such as tuberculosis, human
 CC immunodeficiency virus (HIV) (persistent viral infection), malaria,
 CC Helicobacter pylori, influenza, hepatitis (chronic hepatitis B and C),
 CC cytomegalovirus (CMV), viral infection, herpes virus-induced disease,
 CC leprosy and diseases caused by non-malarial protozoan parasite such as
 CC toxoplasma and cancer. The present sequence is an epitope from Plasmodium
 CC falciparum useful in the method of the invention

 PT Modulator of binding between discs-large homology repeat protein, PDZ and
 PT PDZ ligand protein, is a peptide having few residues of C-terminal
 PT sequence of PDZ ligand protein.
 XX
 PS Example 7, Page 150, 172pp, English.
 XX
 CC The invention relates to a novel modulator of binding between a PDZ
 CC protein (post-synaptic density protein 95 (PSD95), Drosophila large disc
 CC protein and zonula Occludin 1 protein (ZO-1)) and a PDZ ligand (PL)
 CC protein. The modulator is a peptide having 3 residues of a C-terminal

CC sequence of a PL protein. PDZ and PL proteins are a binding pair given in
 CC specification, or a peptide mimetic of the 3 residue PL protein, or a
 CC small molecule having similar functional activity as the 3 residue PL
 CC protein. The reagents of the invention have the following activities:
 CC antiinflammatory, antiallergic, antitumor, antiparasitic, antiasthmatic,
 CC dermatological, neuroprotective, virucide, antidiabetic, osteopathic,
 CC antiarthritic, immunosuppressive, antiatherosclerotic, cystostatic, anti-
 CC HIV, vasotropic, and immunomodulator. The novel modulator is useful for
 CC treating a disease correlated with binding between a PDZ protein and PL
 CC protein. The disease can be a neurological disease, immune response
 CC disease, muscular disease or cancer. The modulator is useful for
 CC modulating vesicular trafficking, tumor suppression, signal
 CC transduction, protein sorting, establishment of membrane polarity,
 CC apoptosis, regulation of immune response and organization of synapse
 CC formation. The modulator is useful for facilitating the assembly of multi-
 CC -protein complexes, often serving as a bridge between several proteins,
 CC or regulating the function of other proteins, and to inhibit leukocyte
 CC activation. The modulator is useful for treating diseases characterised
 CC by inflammatory and humoral immune responses e.g., inflammation, allergy,
 CC inflammatory bowel diseases, ulcerative colitis, psoriasis, asthma,
 CC allergic rhinitis, atopic dermatitis, arthritis, multiple sclerosis,
 CC diabetes, osteoarthritis, graft-versus-host diseases, atherosclerosis,
 CC leukemia, infectious diseases (viral infection such as human
 CC immunodeficiency virus (HIV)), and ischemia. This sequence represents a
 CC PDZ ligand (PL) peptide of the invention.

XX New composition comprising at least one peptide having allele-specific
 PT binding motifs for HLA, useful for preventing, treating or diagnosing
 PT viral diseases and cancer.
 XX Claim 1; Page 52-379; 382pp; English.

XX The invention relates to a composition comprising at least one peptide
 CC having an isolated, prepared epitope selected from any of the sequences
 CC from 30 lists given in the specification. Also disclosed is a method for
 CC inducing a cytotoxic T cell response against a pre-selected antigen in a
 CC patient expressing a specific MHC class I allele by contacting cytotoxic
 CC T cells from the patient with the composition cited above. The
 CC composition comprises an epitope that is joined by an amino acid linker.
 CC The epitope is admixed or joined to a CTL or HTL epitope. The epitope is
 CC bound to an HLA molecule on the antigen-presenting cell, where when an A2
 CC -restricted cytotoxic lymphocyte (CTL) is present, a receptor of the CTL
 CC binds to a complex of the HLA molecule and the epitope. Specifically
 CC claimed are peptides having allele-specific binding motifs for HLA. The
 CC compositions and methods are useful for preventing, treating or
 CC diagnosing viral diseases and cancer. The peptide epitopes are useful as
 CC diagnostic agents for evaluating immune responses, for making antibodies
 CC and for evaluating efficacy of a vaccine. Sequences given in ADW29251-

XX New composition comprising at least one peptide having allele-specific

XX binding motifs for HLA, useful for preventing, treating or diagnosing

XX viral diseases and cancer.

XX Claim 1; Page 52-379; 382pp; English.

CC The invention relates to a composition comprising at least one peptide
 CC having an isolated, prepared epitope selected from any of the sequences
 CC from 30 lists given in the specification. Also disclosed is a method for
 CC inducing a cytotoxic T cell response against a pre-selected antigen in a
 CC patient expressing a specific MHC class I allele by contacting cytotoxic
 CC T cells from the patient with the composition cited above. The
 CC composition comprises an epitope that is joined by an amino acid linker.
 CC The epitope is admixed or joined to a CTL or HTL epitope. The epitope is
 CC bound to an HLA molecule on the antigen-presenting cell, where when an A2
 CC -restricted cytotoxic lymphocyte (CTL) is present, a receptor of the CTL
 CC binds to a complex of the HLA molecule and the epitope. Specifically
 CC claimed are peptides having allele-specific binding motifs for HLA. The
 CC compositions and methods are useful for preventing, treating or

CC diagnosing viral diseases and cancer. The peptide epitopes are useful as
 CC diagnostic agents for evaluating immune responses, for making antibodies
 CC and for evaluating efficacy of a vaccine. Sequences given in ADW39251-
 CC ADW37745 represent epitopes of the invention as given in Tables 2-31.

XX Claim 16; Page 177; 220pp; English.

CC This invention relates to a novel polypeptide encoded by an alternative
 CC reading frame of a pathogenic virus, where the polypeptide starts with a
 CC methionine amino acid residue, which comprises an antigenic determinant
 CC and more than 7 amino acid residues. The invention may be useful for the
 CC production of compounds with a virocidic activity or the development of a
 CC vaccine. The polypeptide or its fragments may be useful as a therapeutic
 CC agent. It is also useful for the manufacture of a medicament for treating
 CC or preventing an infection with the pathogenic virus. The present
 CC sequence is that of a human papillomavirus (HPV) epitope peptide of the
 CC invention.

PT New immunogenic peptides with HLA binding motif, useful in treatment and
PT diagnosis of cancers and viral diseases.
XX
PS Claim 1; Page 78; 150pp; English.
XX
AAV45390 to AAV48214 represent specifically claimed immunogenic peptides
CC having a human major histocompatibility complex (MHC) Class I (also known
CC as human leukocyte antigen (HLA)) binding motif. The immunogenic peptides
CC can bind to a specific HLA allele (i.e. HLA-A subtypes HLA-A2.1, A1, A3.2
CC or A24.1 or HLA-B or C) and induce a cytotoxic T cell response against
CC the antigen from which the peptide is derived. Cytotoxic T lymphocytes
CC (CTLs) which destroy antigen-bearing cells are normally induced by an
CC antigen in the form of a peptide fragment bound to a HLA molecule, rather
CC than the intact foreign antigen itself, and are particularly important in
CC tumour rejection and in fighting viral infections. The peptides are
CC therefore useful therapeutically to treat or prevent viral infections and
CC cancers in mammals (especially humans) e.g. prostate cancer, hepatitis B
CC and C, AIDS, and renal carcinoma. They can be administered as vaccines to
CC elicit an immune response in individuals susceptible or otherwise at risk
CC of viral infection or cancer, or used to treat chronic or acute
CC conditions. They are also useful diagnostically, and can be used to
CC induce a cytotoxic T cell response, by contacting a cytotoxic T cell with
CC the peptide e.g. to produce CTLs ex vivo for infusion back into a
CC patient. The polynucleotides encoding the immunogenic peptides are also
CC useful therapeutically and for immunisation as above

 PS Claim 49, SEQ ID NO 48; 277pp; English.
 XX
 CC The invention comprises a method for producing a polyhydroxyalkanoate
 CC (PHA)-containing structure. The method involves immobilizing a PHA
 CC synthase enzyme on a base material surface and then synthesizing PHA
 CC using 3-hydroxyacyl coenzyme A as a substrate. The method of the
 CC invention is useful for manufacturing a PHA-containing structure. The PHA
 CC -containing structure has a wide range of applications as a variety of
 CC functional structures, such as: a pigment dispersant of excellent
 CC dispersion stability; a toner for electrophotography of excellent
 CC electrostatic property; and the laminated structure as an OHP film. The
 CC structure is also useful for microcapsule pigment ink of excellent
 CC dispersion stability, an electrophoretic particle for electrophoresis
 CC display, and colouring composition for a colour filter. The present amino
 CC acid sequence represents a carbon black-binding peptide.

 PS Claim 11; SEQ ID NO 25; 63pp; English.
 XX
 CC The present invention describes an assay (M1) for determining the
 CC presence or an amount of a target antibody or antigen in a specimen. M1
 CC comprises: (a) preparing a carrier on which an antigen or antibody
 CC corresponding to the target antibody or antigen in the specimen
 CC respectively is immobilized; and (b) mixing the carrier with the specimen
 CC and assaying the level of the immunological agglutination reaction caused
 CC by the mixing step, where the antigen or antibody immobilized on the
 CC carrier is bound to the carrier through an amino acid sequence capable of
 CC binding to the carrier. Also described: (1) an assay reagent (I), for
 CC (M1), where an antigen or antibody corresponding to the antibody or
 CC antigen is immobilized on a carrier and the antigen or antibody
 CC immobilised on a carrier is bound to the carrier through an amino acid
 CC sequence capable of binding to the carrier; (2) producing (M2) (I)
 CC comprising immobilising an antigen or antibody corresponding to the
 CC antibody or antigen immobilised on a carrier and the antigen or antibody
 CC immobilised on a carrier is bound to the carrier through an amino acid
 CC sequence capable of binding to the carrier; (3) a peptide (II) comprising
 CC one or more amino acid sequence (SEQ ID NO:1-SEQ ID NO:40); and (4) an
 CC antigen protein or antibody protein comprising one or more sequences
 CC chosen from (SEQ ID NO:1-SEQ ID NO:40). (M1) is useful for determining
 CC the presence or an amount of a target antibody or antigen. (I) can be
 CC used as an assay reagent for clinical laboratory tests or environmental
 CC or food analysis. The present sequence is used in the exemplification of
 CC the present invention.

XX Disclosure; Page 15; 99pp; English.

XX

XX This sequence represents a peptide used to generate polyclonal antibodies

CC against human epidermal growth factor-like variant in skin (ELVIS)

CC proteins. The ELVIS gene is located on chromosome 4q12-13. The invention

CC relates to a family of ELVIS proteins (ELVIS-1, 2, and 3), ELVIS-1 is a

CC membrane protein, while ELVIS-2 and ELVIS-3 are secreted proteins. These

CC proteins show considerable identity to transforming growth factor alpha

CC	(TGF- α) . The nucleotide sequence encoding the ELVIS proteins of the
CC	invention have antiproliferative, cytostatic, vulnerary, dermatological,
CC	antiinflammatory, and antiallergic activity. ELVIS encoding nucleotide
CC	sequences are useful as modulating agents in regulating a variety of
CC	cellular processes such as cell proliferation, cell migration and
CC	chemotaxis, cellular differentiation and/or angiogenesis and also in
CC	screening and detection assays and as predictive medicines. Elvis
CC	nucleotide sequences are useful in gene therapy techniques and to express
CC	ELVIS proteins. The ELVIS proteins are useful for treating proliferative
CC	disorders such as psoriasis and cancer, and to promote hair growth and
CC	wound healing. Modulators of ELVIS are useful in the treatment of contact
CC	dermatitis and burns, for treating bipolar affective disorder. The
CC	proteins can also be used to modulate epithelial cell growth and in the
CC	treatment of hair loss

XX Walk-through mutagenesis of a nucleic acid encoding a polypeptide, useful
 PT for producing mutant polypeptides comprising synthesizing oligonucleotides
 PT comprising a nucleotide sequence for each target region of a prototype
 PT amino acid.

XX Example; Fig 6; 40pp; English.

XX This invention relates to a novel method of walk-through mutagenesis of a
 CC nucleic acid encoding a polypeptide which comprises synthesizing a
 CC mixture of oligonucleotides comprising a nucleotide sequence for each
 CC target region of a prototype amino acid, where each oligonucleotide
 CC contains, at each sequence position in the target region, a prototype
 CC nucleotide for synthesis of the prototype amino acid, or a predetermined
 CC nucleotide that is required for synthesis of the predetermined amino
 CC acid. The method is useful in producing mutant polypeptides in which the
 CC overall presence of the predetermined amino acid is limited to one or two
 CC positions per mutated polypeptide, leaving the remaining amino acids in
 CC the targeted region intact or as close as possible to the prototype
 CC sequence. The invention was exemplified using the three complementarity
 CC determining regions (CDRs) of the heavy chain of the monoclonal antibody
 CC MCPC 603.

XX PT Identifying CD4+ human papillomavirus (HPV) epitopes or determining T-
XX PT cell epitope of HPV strain, useful in prophylactic/therapeutic vaccines,
XX PT by combining dendritic cells, CD4+ and/or CD8+ T-cells with pepset of
XX PT peptides from HPV.
XX PS Claim 4; SEQ ID NO 81; 56pp; English.
XX CC This invention relates to a novel method of identifying CD4+ human
XX CC papillomavirus (HPV) epitopes or determining a T-cell epitope of a HPV
XX CC strain. The method comprises combining a solution of differentiated
XX CC dendritic cells and naive CD4+ and/or CD8+ T-cells with a set of peptides
XX CC from the HPV (which comprises the T-cell epitope) and measuring T-cell
XX CC proliferation. The invention may be useful for the production of
XX CC compounds with an antiviral or cytostatic activity. The method or the
XX CC modified epitopes are useful in prophylactic and/or therapeutic vaccines,
XX CC as means for the development of HPV vaccines for the prevention of
XX CC infection with high-risk HPV strains, or as means for the development of
XX CC therapeutic vaccines against high-risk HPV types for use in the
XX CC prevention of the development of benign and/or malignant tumors in
XX CC infected individuals. The present sequence is that of a Human
XX CC papillomavirus-derived epitope peptide which was identified using the
XX CC method of the invention.

PT Selecting agents useful for treating Alzheimer's disease comprises
PT contacting focal adhesion kinase 2 with a test agent and measuring a
PT biological activity related to focal adhesion kinase 2 function with or
PT without the test agent.
XX
PS Disclosure; SEQ ID NO 382; 247pp; English.
XX
CC The present invention relates to a method for selecting agents that are
CC potentially useful for the treatment of Alzheimer's disease. The method
CC comprises contacting focal Adhesion Kinase 2 (FAK2) with a test agent and
CC measuring a biological activity related to FAK2 function in the presence
CC and absence of the test agent. The method is useful for screening
CC compounds or agents that can be used to treat neurological disorders,
CC ailments and diseases including mild cognitive impairment, depression,
CC schizophrenia, obsessive-compulsive disorder, bipolar disorder, and
CC neurodegenerative diseases and disorders and motor neuron diseases and
CC disorders such as Alzheimer's disease, Parkinson's disease, dementia with

CC Lewy bodies, amyotrophic lateral sclerosis or Lou Gehrig's disease,
CC Alpers' disease, Leigh's disease, Pelizaeus-Merzbacher disease,
CC Olivopontocerebellar atrophy, Friedreich's ataxia, leukodystrophies, Rett
CC syndrome, Ramsay Hunt syndrome type II, and Down's syndrome, as well as
CC for treating or preventing other diseases such as dislipidemia, diabetes,
CC obesity, cardiovascular diseases such as atherosclerosis and coronary
CC heart disease. Also disclosed is the coding sequence for a novel human
CC phosphatase called PN7740 (ADU78628 and ADU78629). PN7740 contains a
CC protein phosphatase 2C domain, which likely acts to dephosphorylate
CC specific phospho-serine or phospho-threonine residues on particular
CC protein substrates. Although the precise role played by protein
CC phosphatase 2Cs in Alzheimer's disease pathogenesis has yet to be
CC defined, the inventors have discovered that fragments of PN7740 interact
CC with the first phosphorylation binding domain (PTB) domain of Pe65 (also
CC known as ABBA1 (710) or amyloid beta (A4) precursor protein-binding,
CC family B, member 1, isoform B9 (710)), suggesting that PN7740 may well be
CC involved somehow. Pe65 is known to interact with the cytosolic C-terminal
CC region of Amyloid beta (A4) precursor protein (APP) and APP metabolism is
CC critical to the pathogenesis of Alzheimer's disease, because it leads to
CC the release of either toxic Abeta or trophic secreted APP (sAPP)
CC metabolites. The present sequence is a potentially useful agent for
CC Alzheimer's disease.

 PT Non-enzymatic method for the positive selection of target cells from a
 PT heterogeneous cell suspension, useful for selecting human breast cancer
 PT cells from a patient's blood or bone marrow.
 XX
 PS Example 11; Col 43; 82pp; English.
 XX
 CC This sequence represents a human haematopoietic CD34+ cell binding
 CC peptide, and was used to test the method of the invention. The method is
 CC a non-enzymatic method for the positive selection of one or more target
 CC cells from a heterogeneous cell suspension, by using specific peptides
 CC which effect the displacement and release of a specific target cell from
 CC a specific monoclonal antibody. The method is useful for positive
 CC selection and specific release of target human haematopoietic
 CC stem/progenitor cells bound by the monoclonal anti-CD34 antibodies and
 CC the antibody 561. The method is also useful for positive selection and
 CC specific release of target human breast cancer cells, bound by the
 CC monoclonal anti-breast cancer antibody 9187, from a patient's blood or
 CC bone marrow. Identification of peptide epitopes for antibodies which
 CC recognize cell surface determinants also allows construction of
 CC diagnostic cell based assays. The peptide mediated release is enzyme free
 CC and thus leaves the cell surface proteins intact. Moreover, peptide
 CC mediated release leaves the target cell free of bound antibody or
 CC antibody fragments. The method also produces a high yield of functional
 CC target cells and is relatively inexpensive to carry out

PT Identifying G protein coupled receptor (GPCR) signaling inhibitors,
 PT useful in screening drugs for treating stroke, cancers or pain, by
 PT identifying compounds that block GPCR mediated signaling with high
 PT affinity and specificity.
 XX

PS Claim 94; Page 69; 94pp; English.
 XX

XX The invention relates to a novel method for identifying a G protein
 CC coupled receptor (GPCR) signaling inhibitor. The novel method comprises
 CC selecting or identifying a member of a library of peptides and/or
 CC candidate compounds, having binding to a GPCR of higher affinity than
 CC that of the native peptide. The peptide library is based on a native GPCR
 CC binding peptide. The method is useful for identifying inhibitors of a G
 CC protein coupled receptor (GPCR) signaling. The method is particularly
 CC useful for identifying drugs that antagonise the binding between a GPCR
 CC and its extracellular ligand(s). The method is especially useful in
 CC modern high throughput screening assays for identifying potent lead
 CC compounds. The compounds, peptides or inhibitors identified by the method
 CC are useful for preventing, ameliorating or treating diseases in which
 CC GPCR signaling is a causative factor or in which a specific class of G
 CC protein is relevant, e.g. stroke, myocardial infarction, restenosis,
 CC atherosclerosis, hypotension, cancers, infections, septic shock, pain,
 CC allergic disorders, asthma, inflammatory bowel disease, osteoporosis,
 CC obesity, or psychotic and neurological disorders (e.g. anxiety, schizophrenia or Alzheimer's disease). This sequence represents a peptide
 CC relating to the G protein coupled receptors of the invention

PT Identifying modulators of G protein coupled receptor (GPCR) signaling,
 PT useful for treating diseases associated with altered GPCR signaling (e.g.
 PT stroke), comprises screening a peptide library for high affinity binding
 PT to the GPCR.
 XX

PS Disclosure; SEQ ID NO 247; 264pp; English.
 XX

XX The invention relates to a method of identifying a G protein coupled
 CC receptor (GPCR) signaling modifying peptide by providing a peptide
 CC library based on a native GPCR binding peptide, screening the peptide
 CC library for high affinity binding to the GPCR, and selecting a member of
 CC the peptide library having binding to the GPCR of higher affinity than
 CC that of the native peptide. The composition and methods are useful for
 CC identifying modulators of GPCR signaling, for modulating the activity of
 CC GPCR or for drug designing. These may be used for diagnosing, preventing
 CC or treating diseases associated with altered GPCR signaling, such as
 CC stroke, myocardial infarction, atherosclerosis, hypertension, cancer,
 CC infections (e.g. bacterial, fungal or viral), pain, allergies, asthma,
 CC inflammation, Parkinson's disease and Alzheimer's disease. This sequence
 CC corresponds to a peptide of the invention.

 CC This invention relates to a new human antibody specific for human
 CC interleukin-12 (IL-12). The invention also includes antigen binding
 CC portions that bind to IL-12. Sequences AAB39485-B39516 represent human
 CC anti-IL-12 antibody heavy and light chain complementarity determining
 CC region (CDR) amino acid sequences, and also includes variable region
 CC amino acid sequences. Other variable region amino acid sequences are
 CC given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39561-B39771
 CC represent anti-IL-12 CDR3 related amino acid sequences, AAB39772-B40063
 CC represent other CDR sequences. Light chain CDR3 consensus sequences are
 CC given in AAB40064-B40067. Primers used in the identification and
 CC construction of the antibodies of the invention are given in AAC61062-
 CC C61071. The antibody of the invention is a neutralizing antibody and has
 CC antirheumatic; antiarthritic; antileukemic; antinflammatory;
 CC neuroprotective; antiparasitic; antiaesthetic; cardiant; antiparasitic;
 CC antibacterial and immunosuppressive activity. The antibodies or antigen-
 CC binding fragments are useful in the treatment of disorders associated
 CC with detrimental release of human IL-12, especially Crohn's disease,
 CC multiple sclerosis and rheumatoid arthritis. They can also be used in the
 CC manufacture of a pharmaceutical composition to treat human IL-12
 CC disorders

 PT Walk-through mutagenesis of a nucleic acid encoding a polypeptide, useful
 PT for producing mutant polypeptides comprising synthesizing oligonucleotides
 PT comprising a nucleotide sequence for each target region of a prototype
 PT amino acid.
 XX
 PS Example; Fig 6; 40pp; English.
 XX
 CC This invention relates to a novel method of walk-through mutagenesis of a
 CC nucleic acid encoding a polypeptide which comprises synthesizing a
 CC mixture of oligonucleotides comprising a nucleotide sequence for each
 CC target region of a prototype amino acid, where each oligonucleotide
 CC contains at each sequence position in the target region, a prototype
 CC nucleotide for synthesis of the prototype amino acid, or a predetermined
 CC acid. The method is useful in producing mutant polypeptides in which the
 CC overall presence of the predetermined amino acid is limited to one or two
 CC positions per mutated polypeptide, leaving the remaining amino acids in
 CC the targeted region intact or as close as possible to the prototype
 CC sequence. The invention was exemplified using the three complementarity
 CC determining regions (CDRs) of the heavy chain of the monoclonal antibody
 CC MCP6 603.

XX
XX
XX Determining the activity of a Chk2 polypeptide, useful in drug discovery
XX industry, comprises contacting a Chk2 polypeptide and an E2F-1
XX polypeptide comprising residue Ser 364 and determining whether Ser 364
XX has been phosphorylated.
XX
XX Example; Fig 2b; 41pp; English.
XX
XX The specification describes a method for determining the activity of
XX checkpoint kinase Chk2. The method comprises contacting a Chk2
XX polypeptide and an E2F-1 polypeptide comprising residue Ser 364 under
XX conditions in which Chk2 is able to phosphorylate the E2F-1 polypeptide,
XX and determining whether the Ser 364 residue of E2F-1 polypeptide has been
XX phosphorylated. Chk2 functions as a key effector of E2F-1 induction
XX during DNA damage. The regulation of E2F-1 activity through the DNA
XX damage signalling pathway and specifically by Chk2 implies a role for E2F
XX -1 in checkpoint control. Such a role for E2F-1 may contribute to the
XX tumour suppressor activity of E2F-1. Antibodies which bind preferentially
XX to the phosphorylated form of E2F-1 protein are useful for prognosing
XX or determining whether Ser 364 of E2F-1 in samples obtained from patients
XX is in a phosphorylated or unphosphorylated form, thus useful for
XX determining appropriate treatments for patients. The method is useful in
XX the drug discovery industry. ADU00097-ADU00102 represent Chk2
XX phosphorylation sites, which were compared to derive a consensus

XX
XX
XX Modified phage display library depleted in phage that react with native
XX cellular proteins - provides reduced noise and higher signal-to-noise
XX ratio when screened against cells transfected to express a specific
XX heterologous protein, used to identify potential therapeutic and
XX diagnostic agents.
XX
XX Example 1; Page 29; 49pp; English.
XX
XX The invention relates to a modified phage library for use with a selected
XX strain of cells that have been transformed to express a heterologous
XX protein (I) in a screening procedure, to detect specific binding between
XX individual phage and a recognition site on the heterologous protein. The
XX modified library is produced as follows. The initial phage library is
XX fractionated by contact with strain of cells that do not express (I) to
XX bind any phage that bind to cellular proteins other than the (I). Bound
XX and unbound phages are separated to produce the modified library,
XX depleted in components that bind proteins other than (I). The library is
XX used to identify phage that bind to cell-surface associated (I)
XX specifically receptors. Peptides identified by screening with the
XX modified library are potentially useful as therapeutic and diagnostic
XX agents, for diseases involving (I) or its ligands (including as carriers
XX for delivering drugs, toxins or antibodies to cells), and their amino
XX acid sequences can be used to design other agents for the same uses. The
XX initial fractionation eliminates much of the noise caused by binding to
XX other cell-surface proteins, and the use of transfected cells for
XX screening (these express a far greater number of (I) than wild-type
XX cells) improves the signal-to-noise ratio. The number of rounds of
XX screening may thus be reduced. (Updated on 27-AUG-2003 to correct OS
XX field.) (Updated on 17-OCT-2003 to standardise OS field)

XX Example 3; SEQ ID NO 81; 105bp; English.
XX
XX The present invention provides PAD4 compositions and methods for using
CC PAD4 compositions for enhancing disease resistance of a plant. The
CC invention is useful for enhancing the resistance of a plant to disease
CC such as those caused by virus, bacteria, fungi, oomycetes, nematodes and
CC insects. The invention is also useful in producing plants having enhanced
CC disease resistance and in-plant protection against diseases which
CC consequently reduces or minimizes the need for traditional chemical
CC practices, increases production efficiency, improves crop and ornamental
CC quality. The invention is also useful in gene therapy. The present
CC sequence is Arabidopsis thaliana Eds1 peptide.

PT	New peptides that bind gp120 of HIV-1, useful for blocking the entry of HIV-1 into cells, for studying or treating AIDS, or for developing new approaches to control HIV infection.		
PT			
XX	Claim 1; SEQ ID NO 2; 27pp; English.		
CC	ADRA5756-ADRA5761 represent peptides which bind to gp120 of human immunodeficiency virus type 1 (HIV-1). The peptides are derived from the region of anti-HIV-1 antibodies which bind to gp120. This region has sulphared tyrosines, which must be present in the present peptides. The affinity of the peptides for gp120 on the HIV-1 viral surface may be increased by sulphating tyrosine residues. The peptides are useful for preventing the binding of gp120 to CCR5 receptors on the surface of immune cells, thus blocking the entry of HIV-1 into cells. They may be used for studying or treating AIDS and for developing new approaches to control HIV infection.

PT	Use of inhibitors of human-PRUNE cyclic nucleotide phosphodiesterase for
PT	preparation of medicament in the treatment of tumor metastases associated
PT	with overexpression of human-PRUNE.
XX	
PS	Example 1; Fig 1; 89pp; English.
XX	
CC	This invention relates to a novel method for preparing a medicament for
CC	the treatment of tumor metastases associated with overexpression of human
CC	-PRUNE. The method comprises using inhibitors of human-PRUNE cyclic
CC	nucleotide phosphodiesterase. The invention may be useful for the
CC	development of compounds with a cytostatic activity acting as human-PRUNE
CC	overexpression inhibitors. The invention is useful for preparation of
CC	medicaments in the treatment of tumor metastases, for example breast
CC	carcinoma, sarcoma, neuroblastoma, prostate tumor, pancreatic tumor,
CC	colonic tumor, rectal tumor, medulloblastoma, epithelioma, epatocarcinoma,
CC	cell T or cell B lymphomas, myeloma and melanoma and pulmonary tumor. As
CC	the h-PRUNE poses cyclic nucleotide phosphodiesterase activity with
CC	preferential activity for camp over cGMP, the h-PRUNE overexpression can
CC	be effectively suppressed by certain PDE inhibitors thus the PDE
CC	inhibitor provides an effective alternative therapy for cancer treatment.
CC	The present sequence is that of a protein motif which was used during the
CC	development of the novel method of the invention.

 PT New cedar pollinosis antigen T-cell epitope in a dog useful for preparing
 PT a DNA vaccine that can be used to prevent allergic dermatitis.
 XX
 PS Example 7; SEQ ID NO 17; 20pp; Japanese.
 CC The invention relates to T-cell epitopes of the Japanese cedar
 CC (Cryptomeria japonica) pollen allergen Cry j 1 which stimulate an immune
 CC response in dogs. The invention also encompasses DNA encoding the Cry j 1
 CC T-cell epitopes, a vector comprising a Cry j 1 T-cell epitope-encoding
 CC DNA, and DNA vaccine containing a vector of the invention for the
 CC treatment of allergic dermatitis. The Cry j 1 T-cell epitopes and their
 CC encoding nucleic acids are useful in the preparation of vaccines,
 CC especially DNA vaccines, for the treatment of allergic dermatitis in
 CC dogs. The DNA vaccine of the invention can be prepared inexpensively with
 CC easier manufacturing and purification processes. The present sequence
 CC represents a Cry j 1 peptide used in an example of the invention.

 CC The invention relates to a novel isolated Japanese cedar pollen allergen.
 CC The allergen is produced in a host cell transformed with a nucleic acid,
 CC comprising any of the fully defined sequences having 1337 or 1726 bp
 CC (AEB24081 or AEB24213). The invention further comprises: an isolated
 CC peptide of a Japanese cedar pollen allergen, comprising any of the fully
 CC defined sequences having 374 or 514 amino acids (AEB24082 or AEB24214),
 CC where the peptide has at least one epitope of the pollen allergen, and
 CC where the epitope does not consist of amino acid residues 1-20 or 325-340
 CC of the 374-amino acid sequence. The isolated Japanese cedar pollen
 CC allergen has an antiallergic activity as it is useful in preparing a
 CC composition for diagnosing, treating or preventing Japanese cedar
 CC pollinosis. This sequence represents a Japanese cedar pollen allergen
 CC epitope polypeptide of the invention.

XX
XX
PS Claim 14; Page 69; 145pp; English.
CC This invention describes a novel nucleic acid molecule encoding a
CC hyperimmune serum reactive antigen or its fragment from Streptococcus
CC pyogenes. The nucleic acid molecule or hyperimmune serum-reactive antigen
CC or its fragment are useful for the manufacture of a pharmaceutical
CC preparation, especially a vaccine, against S. pyogenes infection. In
CC addition, the hyperimmune serum reactive antigen or fragment is used for
CC the isolation and/or purification and/or identification of an interaction
CC partner of the hyperimmune serum reactive antigen or its fragment, for

CC the generation of a peptide (e.g. anticaline) binding to the antigen or
CC fragment, or for the manufacture of a functional nucleic acid selected
CC from aptamers and Spiegelmers. The nucleic acid molecule may also be used
CC for the manufacture of functional ribonucleic acids, such as ribozymes,
CC antisense nucleic acids and siRNA. ADR83733-ADR84189 represent S.
CC pyogenes hyperimmune serum reactive antigens, fragments and the encoding
CC polynucleotide described in the invention.

XX
XX Claim 94; Page 65; 94pp; English.
PS
XX
XX The invention relates to a novel method for identifying a G protein
CC coupled receptor (GPCR) signalling inhibitor. The novel method comprises
CC selecting or identifying a member of a library of peptides and/or
CC candidate compounds, having binding to a GPCR of higher affinity than
CC that of the native peptide. The peptide library is based on a native GPCR
CC binding peptide. The method is useful for identifying inhibitors of a G
CC protein coupled receptor (GPCR) signalling. The method is particularly
CC useful for identifying drugs that antagonise the binding between a GPCR
CC and its extracellular ligand(s). The method is especially useful in
CC modern high throughput screening assays for identifying potent lead
CC compounds. The compounds, peptides or inhibitors identified by the method
CC are useful for preventing, ameliorating or treating diseases in which
CC GPCR signalling is a causative factor or in which a specific class of G
CC protein is relevant, e.g. stroke, myocardial infarction, restenosis,
CC atherosclerosis, hypotension, cancer, infections, septic shock, pain,
CC allergic disorders, asthma, inflammatory bowel disease, osteoporosis,
CC obesity, or psychotic and neurological disorders (e.g. anxiety,
CC schizophrenia or Alzheimer's disease). This sequence represents a peptide
CC relating to the G protein coupled receptors of the invention

PT useful for treating diseases associated with altered GPCR signaling (e.g.
PT stroke), comprises screening a peptide library for high affinity binding
PT to the GPCR.
XX
PS Disclosure; SEQ ID NO 185; 264bp; English.
XX
XX The invention relates to a method of identifying a G protein coupled
CC receptor (GPCR) signaling modifying peptide by providing a peptide
CC library based on a native GPCR binding peptide, screening the peptide
CC library for high affinity binding to the GPCR, and selecting a member of
CC the peptide library having binding to the GPCR of higher affinity than
CC that of the native peptide. The composition and methods are useful for
CC identifying modulators of GPCR signaling, for modulating the activity of
CC GPCR or for drug designing. These may be used for diagnosing, preventing
CC or treating diseases associated with altered GPCR signaling, such as
CC stroke, myocardial infarction, atherosclerosis, hypertension, cancer,
CC inflammation, Parkinson's disease and Alzheimer's disease. This sequence
CC corresponds to a peptide of the invention.

XX
XX Novel fluorette peptides which bind with high specificity to fluorophore
PT dyes, useful for detecting biological materials, molecules, target
PT analytes, and intra- and inter-molecular interactions.
XX
PS Claim 11; Page 19; 64bp; English.
XX
XX This invention describes a novel peptide (I) termed a fluorette which
CC comprises a sequence of at least 8 amino acids and which binds to a
CC fluorophore dye. The fluorettes maybe used in detecting biological
CC materials, molecules or target analytes, intracellular events, and intra-
CC and inter-molecular interactions, as well as discovering effective
CC inhibitors. They may also be used for in vitro assays using a large set
CC of fluorophore dyes, e.g. in detection of viral and delivery systems,
CC diagnostics and high throughput assays. The new peptides, due to their
CC small size, are not intrusive to the systems being studied hence, permit
CC detection and analysis of a target moiety or molecule while minimizing
CC target modification. Unlike conventional techniques such as the light-
CC emitting technique, the use of fluorettes minimize or avoid substantial
CC genetic manipulations which may disrupt, interfere, or alter the process
CC being measured. This sequence represents a peptide fluorette capable of
CC binding to Fluorescein which is described in the method of the invention

XX
XX Claim 17; Page 83; 95pp; English.
XX
XX This peptide corresponds to amino acids 248-261 of novel human
XX CC Interleukin-1 receptor accessory molecule (IL-1R AcM) (see AAW53897), a
XX CC new member of the immunoglobulin superfamily that forms a complex with
XX CC type 1 IL-1R. It comprises an epitope-bearing portion of IL-1R AcM. 18
XX CC Antigenic peptides comprising epitope-bearing portions of human IL-1R AcM
XX CC are claimed (see AAW53898-915). These can be used to generate soluble IL-
XX CC 1R AcM-specific antibodies, and may be produced by chemical synthesis or
XX CC by recombinant means using nucleic acid molecules (see AAV23659) of the
XX CC invention. The antibodies are useful as immunoassay reagents for
XX CC detecting IL-1R AcM, for affinity purification of IL-1R AcM and for
XX CC identifying cells that express IL-1R AcM

PS The present invention relates to novel human Severe Acute Respiratory
CC Syndrome (hSARS) viral nucleic acid and protein sequences derived from a
CC hSARS virus having China Center for Type Culture Collection Deposit
CC Accession No. CCTCC-V200303. The present invention also relates to novel
CC nucleic acid molecules (I; ADT41483 or ADT41485) encoding a nucleocapsid-
CC (N) or spike (S)-gene protein of a hSARS virus. Also disclosed are
CC methods for detecting the presence of a N- or S-gene of the hSARS virus
CC or of the protein in a biological sample and identifying a subject
CC infected with the hSARS virus. The hSARS virus, nucleic acid and protein
CC sequences are useful as vaccines for diagnosing or treating SARS. They
CC are also useful in clinical and scientific research applications. The
CC hSARS virus genome (ADT39027) was obtained and the amino acid sequences
CC of all three reading frames were deduced from the complementary strand.
CC ADT40120 is the full-length protein encoded by the first reading frame of
CC the complementary strand and ADT40601 are the peptides from the
CC first reading frame protein. ADT40602 is the full-length protein encoded
CC by the second reading frame of the complementary strand and ADT40603-
CC ADT40976 are the peptides from the second reading frame protein. ADT40977
CC is the full-length protein encoded by the third reading frame of the
CC complementary strand and ADT40978-ADT41482 are the peptides from the
CC third reading frame protein.

PT New isolated nucleic acid molecule useful for detecting, treating,
PT ameliorating, or preventing the virus causing severe acute respiratory
PT syndrome in humans using a real-time quantitative polymerase chain
PT reaction assay.

PS Example; SEQ ID NO 1406; 183bp; English.

XX The invention relates to an isolated nucleic acid molecule consisting
CC essentially of, and/or hybridizes under stringent conditions to a fully
CC defined nucleotide sequence of 16-25 base pairs (bp); SEQ ID NO: 2471-
CC 2476), or its complement. The methods and compositions of the present
CC invention are useful for the detection of the virus causing Severe Acute
CC Respiratory Syndrome (SARS) in humans using a real-time quantitative
CC polymerase chain reaction (PCR) assay. They can also be used in treating,
CC ameliorating, managing or preventing SARS. This sequence corresponds to a
CC partial SARS protein sequence from the complementary reading frame 1.

XX Novel LL2 monoclonal antibody useful for diagnosing and treating B-cell
PT lymphoma or leukemia.

XX Claim 10; Page 11; 30pp; English.

XX The invention relates to an isolated polynucleotide comprising a DNA
CC sequence encoding the amino acid sequence of light chain (kappa) variable
CC (VK) region or heavy chain variable (VH) region of LL2 monoclonal
CC antibody (mAb), and LL2 VH domain or LL2 VH domain. Also included are a
CC protein encoded by the DNAs listed above, an isolated complementarity
CC determining region-1 (CDR1, CDR2 or CDR3) polypeptide of the VK or VH
CC region of the LL2 mAb, a LL2 mAb (comprising the light chain and heavy
CC chains of the LL2 mAb linked to the human kappa and human Igg 1 constant
CC regions, respectively), an LL2 mAb (comprising a light chain and a heavy
CC chain CDR of a LL2 mAb joined to a framework sequence of a human VK and
CC human VH region, respectively, linked to human kappa and Igg 1 constant
CC region domains, respectively, such that the LL2 mAb retains
CC substantially the B-lymphoma cell and leukaemia cell targeting cell

CC internalisation characteristics of the parent mAb2 antibody) and a
CC conjugate comprising a LL2 or LL2 antibody or its fragment covalently
CC bound to a diagnostic or therapeutic reagent. The conjugate is useful for
CC treating and diagnosing a B-cell lymphoma or leukaemia in a subject. The
CC present sequence represents mouse LL2 VH CDR2.

XX Use of inhibitors of human-PRUNE cyclic nucleotide phosphodiesterase for
PT preparation of medicament in the treatment of tumor metastases associated
PT with overexpression of human-PRUNE.

XX Example 1; Fig 1; 89pp; English.

XX This invention relates to a novel method for preparing a medicament for
CC the treatment of tumor metastases associated with overexpression of human
CC -PRUNE. The method comprise using inhibitors of human-PRUNE cyclic
CC nucleotide phosphodiesterase. The invention may be useful for the
CC development of compounds with a cytotoxic activity acting as human-PRUNE
CC overexpression inhibitors. The invention is useful for preparation of
CC medicaments in the treatment of tumor metastases, for example breast
CC carcinoma, sarcoma, neuroblastoma, prostate tumor, pancreatic tumor,
CC colonic tumor, rectal tumor, medulloblastoma, epiteloma, epatocarcinoma,
CC cell T or cell B lymphomas, myeloma and melanoma and pulmonary tumor. As
CC the h-PRUNE poses cyclic nucleotide phosphodiesterase activity with
CC preferential activity for camp over cGMP, the h-PRUNE overexpression can
CC be effectively suppressed by certain PDE inhibitors thus the PDE
CC inhibitor provides an effective alternative therapy for cancer treatment.
CC The present sequence is that of a protein motif which was used during the
CC development of the novel method of the invention.

PT Modified Cryptomeria japonica (Cry j) I peptide(s) - useful for treating
 PT allergy to Japanese cedar pollen allergen or immunologically cross
 PT reactive allergens.

PS Disclosure; Fig 2; 60bp; English.

XX Novel peptides of cry j I have been modified as a part of a
 CC preformulation scheme to develop an optimised drug product for
 CC therapeutic treatment of humans suffering from allergy to Japanese cedar
 CC pollen allergen or an allergen which is immunologically cross reactive
 CC with Japanese cedar pollen allergen. Such modified peptides possess
 CC certain characteristics which render them particularly suitable for drug
 CC product formulation. Peptide fragments of Cry j I, modified and
 CC unmodified, are given in AAR82491-R82525. This peptide fragment
 CC corresponds to amino acids 151-170 of the allergen mature protein.

XX Polypeptides useful as vaccines for prevention and/or treatment of
 PT diseases such as urinary tract infections, caused by Enterobacteriaceae,
 PT comprises mannose-binding domains derived from adhesin molecules.

XX Example; Page 26; 53pp; English.

XX The present sequence is MBD-2 (mannose-binding domain-2)-TQIF peptide
 CC derived from Escherichia coli FimH protein. This sequence was tested for
 CC its immunogenicity in mouse, rabbit and primates. FimH is an adhesin
 CC protein found in type 1 pili of bacteria of the family
 CC Enterobacteriaceae, especially E. coli. The FimH protein comprises
 CC mannose-binding domains (MBDs) and collagen-binding domains (COL). The
 CC present invention relates to engineered polypeptides comprising one or
 CC more domains derived from FimH protein. These polypeptides are used to
 CC produce prophylactic vaccines which are useful for the prevention and/or
 CC treatment of diseases, such as urinary tract infection (UTI) caused by a
 CC bacterium of the family Enterobacteriaceae, especially E. coli in
 CC animals, in particular humans. They are useful as immunogens to stimulate
 CC the production of antibodies for use in passive immuno-therapy, as a
 CC diagnostic reagent and as a reagent in other processes such as affinity
 CC chromatography. The antibodies of the novel poly-peptides are also
 CC useful for research purposes for studying protein-lectin or collagen
 CC binding interactions

PT Antigenic fragments useful for reducing anaphylactic risk and reducing
XX the severity and/or number of allergic symptoms in individuals sensitive
XX to antigens, have reduced ability to bind Immunoglobulin E.
XX
PS Claim 40; Page 52; 100pp; English.
XX
CC The sequence represents the amino acid sequence of native anaphylactic
XX antigen Ara h 2 peptide #9. Ara h 2 is an anaphylactic antigen (A), which
XX was used to design antigenic peptides having a reduced ability to bind
XX IGE as compared with the intact (A), or having a sequence substantially
XX identical to a portion of sequence of an antigen that includes at least
XX one IGE binding site, where at least one IGE binding site of the peptide
XX is altered. The antigenic peptides are used in a composition which is
XX useful for reducing risk or severity of allergic reaction to an antigen.
XX This is done by identifying an individual at risk of allergic reaction to
XX an antigen by identifying prior display of allergic symptoms when exposed
XX to the antigen, or a familial relationship with an individual who
XX previously displayed allergic symptoms when exposed to the antigen.
XX Following this an antigen-specific IGE present on one or more mast cells
XX or basophils in the individual's serum is identified. The individual is
XX then contacted with a peptide corresponding to a portion of the antigen,
XX which is selected, formulated, and delivered so that binding of the
XX CC peptide to antigen-specific IGE is reduced as compared with IGE binding
XX of intact antigen. The composition is also useful for treating and
XX preventing allergic reactions

PT Single exon nucleic acid probes for analyzing gene expression in human hearts.
XX

PS Claim 15; SEQ ID NO 26170; 530bp; English.

XX
CC The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see ABA21535-ABA41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. CC By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RT "Isolation, toxicity and amino terminal sequences of three major
RT neurotoxins in the venom of Malayan krait (Bungarus candidus) from
RT Thailand."
RL J. Biochem. 134:799-804(2003).
CC -1- FUNCTION: Neurotoxin T2 is a presynaptic neurotoxin of the venom
CC that exhibits indirect hemolytic activity against human
CC erythrocytes. The B chain is homologous to venom basic protease
CC inhibitors but has no protease inhibitor activity and is non-
CC toxic.
CC -1- SUBUNIT: Heterodimer; disulfide-linked. The A chains have
CC phospholipase A2 activity and the B chains show homology with the
CC basic protease inhibitors.
CC -1- SUBCELLULAR LOCATION: Secreted.
CC -1- TISSUE SPECIFICITY: Expressed by the venom gland.
CC -1- TOXIC DOSE: LD50 is 0.22 mg/kg by intravenous injection in mice.
CC -1- SIMILARITY: Contains 1 BPT1/Kunitz inhibitor domain.

 RT "Isolation, toxicity and amino terminal sequences of three major
 RT neurotoxins in the venom of Malayan krait (Bungarus candidus) from
 RT Thailand."
 RL J. Biochem. 134:799-804(2003).
 CC -1- FUNCTION: Neurotoxin T1-2 is a presynaptic neurotoxin of the venom
 CC that exhibits indirect hemolytic activity against human
 CC erythrocytes. The B chain is homologous to venom basic protease
 CC inhibitors but has no protease inhibitor activity and is non-
 CC toxic.
 CC -1- SUBUNIT: Heterodimer; disulfide-linked. The A chains have
 CC phospholipase A2 activity and the B chains show homology with the
 CC basic protease inhibitors.
 CC -1- SUBCELLULAR LOCATION: Secreted.
 CC -1- TISSUE SPECIFICITY: Expressed by the venom gland.

CC -1- TOXIC DOSE: LD(50) is 0.22 mg/kg by intravenous injection in mice.
 CC -1- SIMILARITY: Contains 1 BPPI/Kunitz inhibitor domain.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

XX WPI; 2000-052700/04.

XX Novel high molecular weight Dermatophagoides nucleic acid polypeptides

XX used to modify an animal's hypersensitivity to mite allergens.

XX Claim 3; Page 69; 154pp; English.

XX Sequences AAV52510-Y52522 represent proteolytic fragments of

XX Dermatophagoides farinae high molecular weight mite allergen protein (HMW

XX -map) composition. The HMW-map composition was isolated from a D. farinae

XX homogenate by gel filtration, with each fraction being analysed for the

XX presence of proteins that bound to IGE present in mite-allergic dog

XX antisera. The HMW-map composition comprises mapA (a 109 kd protein) and

XX mapB (98 kd). Mite allergenic proteins and peptides, and nucleic acids

XX encoding them, may be used in therapeutic compositions to modify an

XX animal's hypersensitivity reaction to mite allergens. Animals that may be

XX treated include mammals and birds, especially felines, canines, equines,

XX humans, other pets, and work or domestic animals. The proteins or

XX fragments may also be used to diagnose allergies via a skin test. The

XX proteins and peptides can also be used to raise antibodies, which have a

XX variety of potential uses. For example, they can be used as vaccines to

XX passively immunise animals against dust mite hypersensitivity, as

XX positive controls in test kits and as tools to recover desired dust mite

XX allergens from a mixture of proteins

XX New mite allergenic protein isolated from Dermatophagoides, designated

XX Der HMW-map protein, useful as a vaccine for treating mite allergy.

XX Claim 12; Page 70; 161pp; English.

XX The invention relates to an isolated mite allergenic protein of

XX Dermatophagoides, designated Der HMW-map protein, and its related nucleic

XX acid. The Der HMW-map protein is useful for eliciting an immune response

XX against Der HMW-map protein. The protein or a reagent comprising a non-

XX proteinaceous epitope is useful for identifying an animal (e.g., dog,

XX cat) susceptible to or having an allergic response to a mite. A

XX therapeutic composition is useful for desensitising a host animal to an

XX allergic response to a mite. The DNA and protein can be used in the

XX detection of anti-Der HMW-map antibodies in animal fluids, and inhibition

XX of immunoglobulin (Ig)E or Der HMW-map protein activity associated with a

XX disease. Antibodies that bind to Der HMW-map are useful for inhibiting

XX binding of proteins to IGE, to prevent immunocomplex formation, thus

XX reducing hypersensitivity responses to mite allergens, and as vaccines

XX against mite allergen hypersensitivity. Sequences AAU96314-AAU96342

XX represent Der HMW-map polypeptides of the invention

PT New modified adenovirus fiber that bind to Coxsackie-Adenovirus Receptor
PT (CAR) comprises a modification to the fiber protein shaft, useful for
PT developing targeted adenoviruses for therapeutic uses, e.g. gene therapy
PT of retinal disorders.

XX Claim 12; SEQ ID NO 58; 171pp; English.

XX This invention relates to a novel modified adenovirus fiber that bind to
CC the Coxsackie-Adenovirus Receptor (CAR) in vivo and comprises a
CC modification to the fiber protein shaft. Specifically, it refers to a
CC modified adenovirus fiber that binds to CAR with less than 50%
CC preferably less than 1% of the binding affinity of the unmodified fiber,
CC and furthermore is shorter and more rigid than its unmodified
CC counterpart. As such, the present invention describes recombinant
CC de-targeted adenovirus viral particles and vectors that can be used as a
CC base vectors to develop targeted adenoviruses for specific therapeutic a
CC uses. Accordingly, by addition of a heterologous nucleic acid encoding a
CC therapeutic product and a targeting ligand in the capsid of the
CC adenoviral particle, the modified adenovirus vector can be used in gene
CC therapy in order to treat retinal disorders. As such, these compositions
CC exhibit ophthalmological activity. This peptide sequence is a beta repeat
CC motif of a human adenovirus fiber shaft protein that can be modified to
XX reduce CAR binding, given in an exemplification of the invention.

PI specific targets for tumor therapy.
XX
PS Disclosure; Col 35; 65pp; English.

This sequence represents a fragment of a protein tyrosine phosphatase (PTP). It was used to isolate the PST phosphatase interacting protein (PTPIP) sequence of the invention. The protein is a protein tyrosine phosphatase that possesses a non-catalytic domain comprising a proline, serine and threonine rich region and a C-terminal segment of 20 amino acid (aa's) rich in proline, and defines an SH3 binding domain. Nucleic acids encoding native PTPIP molecules can be used to isolate homologous genes specifically expressed in tumour cells, which might provide more specific targets for tumour therapy. The DNA is also useful for the preparation of PTPIP polypeptides by recombinant techniques and as hybridisation probes for searching cDNA and genomic libraries for the coding sequence of other PTPIP polypeptide analogues in other species

 XX
 CC AAB08487-90 represent peptides derived from protein tyrosine phosphatase
 CC (PTP). They were used to identify interaction domains of a murine protein
 CC tyrosine phosphatase (PTP) phosphatase interacting protein (PSPIP).
 CC PSPIP polypeptides are bound by and dephosphorylated by the PEST family
 CC of protein tyrosine phosphatases. PSPIP associates with actin. PSPIP is
 CC useful for inducing the polymerisation of actin monomer in eukaryotic
 CC cells by introducing the polypeptide into the cell. The polypeptide is
 CC useful for identifying and isolating PSPIP homologues in another
 CC mammalian species, in screening assays to identify antagonists and
 CC agonists of native PSPIP polypeptide and as molecular weight markers on
 CC protein gels. The PSPIP nucleic acid is useful for tissue typing of
 CC specific mammalian tissues, for preparing PSPIP polypeptides by
 CC recombinant techniques, as hybridisation probes for searching cDNA and
 CC genomic libraries for the coding sequence of other PSPIP analogues and
 CC to isolate homologous genes specifically expressed in tumour cells.
 CC Antagonists of PSPIP peptide are useful for inhibiting biological
 CC activity of the peptide. Antibodies of PSPIP are useful to identify
 CC rapidly dividing cells and are used to image tumours comprising such
 CC rapidly dividing cells

 XX
 PS Claim 1; SEQ ID NO 70; 103pp; English.
 XX
 CC The invention relates to a new Severe Acute Respiratory Syndrome (SARS)

CC virus T-cell epitope comprising 407 peptide sequences appearing as
 CC ADM22945-ADM23351. Also included are predicting peptides that are
 CC epitopes (or that can be used as diagnostic tools) a vaccine using a
 CC limited number of the SARS virus peptides, e.g., 1, 2, 3, 4, 5, 8, 16,
 CC 32, 64, 128, 256 or 512, given in the specification, or a diagnostic tool
 CC using a limited number of the SARS virus peptides, e.g., 1, 2, 3, 4, 5,
 CC 8, 16, 32, 64, 128, 256 or 512, given in the specification. Predicting
 CC peptides that are epitopes or that can be used as diagnostic tools
 CC comprises predicting which peptides bind to a MHC (major
 CC histocompatibility complex) molecule with high affinity using a method
 CC with at least one or two of the following features: using a Gibbs sampler
 CC to derive binding motif weight matrices; using a Gibbs sampler including
 CC sequences weighting to derive binding motif weight matrices; or using a
 CC Gibbs sampler including pseudo counts to correct for low counts to derive
 CC binding motif weight matrices. The prediction of the Gibbs sampler weight
 CC matrix is combined with prediction or measurement of proteasomal cleavage
 CC sites, major histocompatibility complex (MHC) binding, presence or
 CC related sequences in patent databases, TAP binding, gene or protein
 CC expression level, function of the protein, localization of the protein,
 CC similarity to self proteins or sequence conservation. The new Severe
 CC Acute Respiratory Syndrome (SARS) virus T-cell epitope is useful in
 CC preparing a vaccine against SARS infection. The present sequence is a
 CC SARS virus epitope of the invention.

XX Identification of compound for treating e.g. cancer by culturing cells
 PT expressing target protein in the presence of growth factor, cytokine,
 PT tumor promoter or oncogene and assessing binding after contacting with
 PT the compound.

XX Claim 12, Page 59, 104pp; English.

XX The invention relates to a novel method for the identification of a
 CC therapeutic compound. The method involves providing test cells that
 CC express a target protein containing a D5F domain and MAP kinase;
 CC culturing the cells in the presence of growth factor, cytokine, tumor
 CC promoter or oncogene, contacting the cells with a candidate compound; and
 CC assessing the binding of the MAP kinase to the D5F domain relative to the
 CC binding in the absence of the candidate compound. The invention further
 CC comprises a method for the identification of a therapeutic compound; a
 CC method for treatment of cancer, which involves administering a compound
 CC that inhibits the binding of a MAP kinase to the D5F domain of a target
 CC protein; and an antibody that specifically binds to phospho-T-325 c-Fos
 CC (preferably polyclonal or monoclonal). The novel therapeutic compounds

PT Identification of compound for treating e.g. cancer by culturing cells
 PT expressing target protein in the presence of growth factor, cytokine, the
 PT tumor promoter or oncogene and assessing binding after contacting with
 PT the compound.

XX Claim 11, Page 49; 104pp; English.

XX The invention relates to a novel method for the identification of a
 CC therapeutic compound. The method involves providing test cells that
 CC express a target protein containing a D5F domain and MAP kinase;
 CC culturing the cells in the presence of growth factor, cytokine, tumor
 CC promoter or oncogene, contacting the cells with a candidate compound; and
 CC assessing the binding of the MAP kinase to the D5F domain relative to the
 CC binding in the absence of the candidate compound. The invention further
 CC comprises a method for the identification of a therapeutic compound; a
 CC method for treatment of cancer, which involves administering a compound
 CC that inhibits the binding of a MAP kinase to the D5F domain of a target
 CC protein; and an antibody that specifically binds to phospho-T-325 c-Fos
 CC (preferably polyclonal or monoclonal). The novel therapeutic compounds
 CC have the following activities: cytostatic, cardiovascular-gen., cardiant,
 CC vasotropic, hypotensive, antiarteriosclerotic, antiinflammatory,
 CC antiallergic, immunosuppressive, antibacterial, antislathmatic,
 CC dermatological, antidiabetic, gastrointestinal-gen., antilicer,
 CC thrombolytic, neuroprotective, ophthalmological, antirheumatic,
 CC antipruritic, uropathic, antiparietic, hepatotropic, antianemic, muscular
 CC -gen., thyromimetic, antichyroid, gynecological, nephrotropic,
 CC hepatocytic, virucide, anti-HIV, anabolic, hypertensive, anorectic,
 CC endocrine-gen., neuroleptic, nootropic, antiparkinsonian, anticonvulsant,
 CC antidiabetic, antidiabetic, sedative, hypnotic, CNS-gen., and
 CC antifertility. The therapeutic compound may be used in the treatment
 CC of: cancer, cardiovascular disorders, inflammatory disorders, metabolic
 CC disorders, neuropathy or a behavioural disorder, and a sleep disorder.
 CC This sequence represents a cancer therapy target peptide of the
 CC invention.

XX CC The sequences given in AAR37718-32 are examples of recombinantly produced
CC collagen-like polymers (CLPs) which consist of repeated tripeptide
CC sequences selected from a wide range of GXY sequences, where X and Y can
CC be any amino acid. These polymers have molecular weights of >30 kD and
CC are able to form helices due to interchain linkages. These polymers pref.
CC contain a proportion of tripeptide triad sequences found in natural
CC collagens, pref. mammalian collagens. The CLPs impart unique
CC characteristics to materials such as fibres, membranes, films, coatings,
CC hydrogels, colloid suspensions and moulded articles. (Updated on 25-MAR-
CC 2003 to correct PN field.)

XX
XX PT Collagen-like polymers comprising repetitive triads - produced in
PT unicellular organisms with improved characteristics, useful in, e.g.
XX photographic and medical fibres.
XX PS Disclosure; Col 5; 43pp; English.

XX CC The invention concerns collagen-like polymers having repetitive triads
CC with reduced proline content, and where glycine is the initial amino acid
CC and the subsequent amino acids are varied. The choice of triads utilised
CC in a recombinant collagen-like polymer are chosen in order to affect
CC properties such as helix stability, hydration, solubility, gel point,
CC biodegradation and immunogenicity. Also considered is the level of
CC guanidine and cytosine nucleotides (due to levels of glycine and proline)
CC present in the genes encoding the polymers. As the gene is synthesised
CC there is opportunity for strands to loop out, single-stranded DNA to be
CC excised, recombination events to occur which can result in loss of
CC segments of the gene, and inefficient transcription and/or translation
CC (due to the presence of self-complementary sequences), hence genes of the
CC invention are designed to provide the advantageous properties of
CC collagen, while at the same time allowing for stable expression of high
CC mol. wt. collagen-like proteins. Triads of particular interest include
CC GAP, GPP, GAS, GPG, GAO, GPR, GPK, GAK, GAR, GBR,
CC GDR, GRP, GDA, GAN and GEA. The collagen-like polymers may impart new
CC characteristics, finding wide use in photographic, medical, structural
CC and fibre applications, and are capable of being produced in unicellular
CC microorganisms at high mol. wts. and in high efficiency. AAR33225-34 are
CC peptides defining a variety of repetitive triad motifs. The peptides are
CC useful as happens, to produce antisera or monoclonal antibodies specific
CC to the sequences which are then used for affinity purification,
CC identification of the polymers, etc. (Updated on 25-MAR-2003 to correct
CC PF field.)

 XX Recombinant collagen-like polymers - useful for making gels, films,
 PT fibres, etc.
 PS Disclosure, Col 6, 93pp; English.
 CC This sequence represents a fragment of a unnatural collagen-like polymer
 CC of the invention. The products may be used as films, fibres, moulded
 CC objects and admixed with other natural or synthetic polymers or coatings
 CC on fibres, films, labware or other surfaces, e.g. prosthetic devices. The
 CC polymers may be used for binding a wide variety of specific binding
 CC materials, as catalytic substances (where the amino acid sequence may
 CC specifically chelate a wide variety of elements), as purification media,
 CC composites, laminates or adhesives. They may also be combined with
 CC inorganic or organic materials such as carbon fibres, nylon fibres,
 CC nitrocellulose, etc., as flask coatings or in synthetic matrices for the
 CC growth and study of cells, as affinity columns or as supports for
 CC biological materials. The polymers have collagen-like properties, but may
 CC be easily expressed in micro-organisms in high efficiency. The new
 CC sequences can be tailored to give the desired properties

 PS
 XX
 XX The invention relates to a novel method for the identification of a
 CC therapeutic compound. The method involves providing test cells that
 CC express a target protein containing a DBF domain and MAP kinase;
 CC culturing the cells in the presence of growth factor, cytokine, tumor
 CC promoter or oncogene; contacting the cells with a candidate compound; and
 CC assessing the binding of the MAP kinase to the DBF domain relative to the
 CC binding in the absence of the candidate compound. The invention further
 CC comprises a method for the identification of a therapeutic compound; a
 CC method for treatment of cancer, which involves administering a compound
 CC that inhibits the binding of a MAP kinase to the DBF domain of a target
 CC protein; and an antibody that specifically binds to phospho-T-325 c-Fos
 CC (preferably polyclonal or monoclonal). The novel therapeutic compounds
 CC have the following activities: cytostatic, cardiovascular-gen., cardiac,
 CC vasotrophic, hypotensive, antiarteriosclerotic, antiinflammatory,

CC antiallergic, immunosuppressive, antibacterial, antitubercular,
 CC dermatological, antidiabetic, gastrointestinal-gen., antitumor,
 CC thrombolytic, neuroprotective, ophthalmological, antirheumatic,
 CC antipruritic, uropathic, antipsoriatic, hepatotropic, antianemic,
 CC -gen., thyromimetic, antihypertensive, hepatotropic, anorectic,

 PT New nucleic acid sequence comprising DPP10 mRNA, useful for the
 PT manufacture of a medicament for regulating DPP10 protein expression or
 PT for preventing or treating inflammatory disease e.g., inflammatory bowel
 PT disease.
 XX
 XX Example 2; Fig 19; 321pp; English.
 PS
 XX The present invention describes a new isolated nucleic acid sequence (I)
 CC comprising a DPP10 mRNA sequence. DPP10 is a dipeptidyl peptidase (also
 CC known as prolyl oligopeptidase). (I) has antiinflammatory, antiasthmatic,
 CC antihistatic, antiallergic and antirheumatic activities, and can be
 CC used in vaccines and gene therapy. A composition comprising (I) can be
 CC used for the manufacture of a medicament for regulating DPP10 expression
 CC or for preventing or treating inflammatory disease e.g., inflammatory
 CC bowel disease, asthma, atopy, rheumatoid arthritis or psoriasis. (I) can
 CC also be used in an assay for detecting or measuring DPP10 in a sample. A
 CC host cell comprising (I) can be used for producing recombinant DPP10 gene
 CC products, or in drug screening systems to identify agents for diagnosis
 CC or treatment of individuals having or susceptible to inflammatory
 CC disease. Human DPP10 is located on chromosome 2, more specifically
 CC chromosome 2q14. ABQ84254 to ABQ84612 and ABP55569 to ABP55629 represent
 CC sequences used in the exemplification of the present invention

 XX Screening, diagnosing and/or treating breast cancer by detecting a change
 PT in expression or activity of a breast cancer membrane protein (BCMP)
 PT polypeptide or encoding nucleic acid molecule.
 PS
 XX Example; SEQ ID NO 1004; 81pp; English.
 XX
 XX The present invention describes a method of screening for and/or
 CC diagnosing breast cancer in a subject, and/or monitoring the
 CC effectiveness of breast cancer therapy. The method comprises detecting
 CC and/or quantifying in a biological sample obtained from the subject a
 CC breast cancer membrane protein (BCMP) polypeptide and a nucleic acid
 CC molecule. Also described: (1) an antibody, its functionally-active
 CC fragment, derivative or analogue, that specifically binds to one or more
 CC of the BCMP polypeptide; (2) a diagnostic kit comprising a capture
 CC reagent specific for an BCMP polypeptide, reagents and instructions for
 CC use; (3) a method for screening for anti-breast cancer agents that
 CC interact with the BCMP polypeptide, comprising contacting the polypeptide
 CC with a candidate agent, and determining whether or not the candidate
 CC agent interacts with the polypeptide; (4) a method for screening for anti-
 CC breast cancer agents that modulate the expression or activity of an BCMP
 CC polypeptide or the nucleic acid molecule cited above, comprising
 CC comparing the expression or activity of the polypeptide or nucleic acid
 CC molecule, in the presence and absence of a candidate agent or in the
 CC presence of a control agent, and determining whether the candidate agent
 CC causes the expression or activity of the polypeptide or nucleic acid
 CC molecule to change; and (5) an agent identified by the method of (3) or
 CC (4), which interacts with the polypeptide or causes the expression or
 CC activity of the polypeptide, or the expression of the nucleic acid
 CC molecule to change. BCMPs have cytostatic activities, and can be used in
 CC vaccines. The BCMP polypeptide, nucleic acid molecule, antibody, agent or
 CC their derivatives, are useful in the manufacture of a medicament for the
 CC treatment of breast cancer, where the composition is a vaccine. The
 CC present sequence represents a BCMP peptide which is used in the
 CC exemplification of the present invention.

PT New extracellular matrix used to accelerate healing of acute gaping
 CC cutaneous wounds and chronic cutaneous ulcers.
 XX
 XX
 PS Claim 10; Page 19; 43pp; English.
 CC This sequence represents a fibronectin protein fragment used in the
 CC extracellular matrix of the invention. The extracellular matrix comprises
 CC two or more fibronectin domains in a backbone matrix, and is used to
 CC enhance wound healing. The fibronectin domain peptides used are
 CC preferably from the IICS domain, the cell binding domain, or the heparin
 CC II binding domain of human fibronectin. The matrix facilitates wound
 CC healing by providing an environment that intrinsically recruits new
 CC tissue cells to the wound site. The new matrix is useful for facilitating
 CC wound healing, especially useful for treating open wounds such as acute
 CC gaping cutaneous wounds and chronic cutaneous ulcers. The problem of
 CC chronic, non-healing wounds is severe. These open wounds require long-
 CC term care and procedures that are costly and labour intensive.
 CC Furthermore, these wounds have a severe impact on the patients' quality of
 CC life. Prior compositions and matrices have not been useful or cost
 CC effective. The present invention provides a matrix for wound healing that
 CC meets these requirements, and overcomes the deficiencies of the prior
 CC matrices

PT Method for isolation of peptides from complex mixture of peptides
 PT involves specific chemical and/or enzymatic alteration of at least one
 PT type of peptide.
 XX

PS Example 19; Page 138; 193pp; English.
 XX

CC The present invention describes a method (M1) for the isolation of a
 CC subset of peptides from a protein peptide mixture (P1). M1 involves: (a)
 CC separating the protein peptide mixture into fractions of peptides via
 CC chromatography; (b) chemically, or enzymatically, or chemically and
 CC enzymatically, altering at least one amino acid of at least one of the
 CC peptides in each fraction, thereby generating a subset of altered
 CC peptides; and (c) isolating the altered (flagged) peptides out of each
 CC fraction via chromatography, where the chromatography of steps (a) and
 CC (c) is performed with the same type of chromatography. M1 can be used for
 CC the isolation and determination of peptides from protein peptide
 CC mixtures. M1 can also be used in diagnostic assays for detection of the
 CC presence, the absence or a variation in expression level of at least one
 CC protein marker or a specific set of proteins indicative of a disease
 CC state. M1 can be used for identifying target proteins present in
 CC metastatic and invasive cancers, in differential expression of proteins
 CC in transgenic mice, identification of proteins that are upregulated or
 CC down regulated in disease tissues, in identification of intracellular
 CC changes in cells with physiological changes such as metabolic shift, in
 CC the identification of biomarkers in cancers and in the identification of
 CC signalling pathways. The method is gel-free methodology for qualitative
 CC and quantitative proteome analysis without the need for multidimensional
 CC chromatography and without the use of affinity tags. ABP74714 to ABP75190

PT New isolated marker for rheumatoid arthritis, useful in preparing a
 PT composition for diagnosing or treating rheumatoid arthritis.
 XX

PS Claim 1; SEQ ID NO 103; 184pp; English.
 XX

CC The invention relates to a novel isolated marker for rheumatoid arthritis
 CC selected from one of many (around 400) markers defined in the
 CC specification. Rheumatoid arthritis is a chronic inflammatory disorder of
 CC the small joints which is estimated to affect 2.1 million people in the
 CC United States alone. Current approaches to treat the disease include the
 CC use of non-steroidal antiinflammatory drugs (NSAIDs), which may reduce
 CC pain, swelling and inflammation, and disease-modifying anti-rheumatic
 CC drugs (DMARDs), which act to slow the progression of the disease and
 CC avoid further joint injury. These drugs are associated with a number of
 CC serious side effects and the search for improved therapeutics is a
 CC subject of active research. The marker of the invention demonstrates
 CC antiarthritic activity and may be useful in preparing a composition for
 CC diagnosing or treating rheumatoid arthritis. The current sequence is that
 CC of a human rheumatoid arthritis marker peptide of the invention.

 PT Detecting a Human Plasma Polypeptide (HPP) comprises contacting a
 PT biological sample with an HPP-binding adsorbent.
 XX
 PS Disclosure, SEQ ID NO 129; 284pp; English.
 XX
 CC The invention relates to a method of detecting a Human Plasma Polypeptide
 CC (HPP) comprising contacting a biological sample with an HPP-binding
 CC adsorbent and detecting and/or quantifying binding of an HPP to the HPP-
 CC binding adsorbent. The invention also relates to a protein array
 CC comprising an adsorbent specific for at least one HPP, a method of
 CC detecting an abnormal concentration of at least one HPP in an individual,
 CC a pharmaceutical composition comprising an amount of HPP-38, HPP-13,
 CC HPP23 or GPR101 polypeptide and a pharmaceutical carrier, a method of
 CC treating cancer, a disease or condition associated with hyperplasia,
 CC neurodegeneration, iron balance or iron transport, a disease associated
 CC with dysregulated serum glucose or a metabolic disorder, a method of
 CC identifying a modulator of a cancer disease, a disease or condition
 CC associated with hyperplasia, neurodegeneration, iron balance or iron
 CC transport or a disease associated with dysregulated serum glucose, a
 CC method of diagnosing or diagnosing a cancer disease, a disease or
 CC condition associated with hyperplasia, neurodegeneration, iron balance or
 CC iron transport or a disease associated with dysregulated serum glucose
 CC and a method of reducing blood glucose levels in a mammal, including a
 CC human. The method is useful for detecting an HPP. The polypeptides,
 CC compositions and methods are useful for diagnosing, diagnosing or
 CC treating a cancer disease, a disease or condition associated with
 CC hyperplasia (e.g. fibrosis, prostate hyperplasia, adrenal hyperplasia or
 CC psoriasis), a disease or condition associated with neurodegeneration
 CC (e.g. spinal cord injuries or CNS injuries, Alzheimers disease,
 CC Parkinsons disease, multiple sclerosis, motor neurone disease,
 CC neuropathy, Guillain Barre syndrome, diabetic neuropathy or demyelinating
 CC disease), a disease or condition associated with iron balance or iron
 CC transport (e.g. hemochromatosis, thalassemia, iron overload, anemia or
 CC sickle cell anemia), a disease associated with dysregulated serum glucose
 CC (e.g. diabetes) or a metabolic disorder (e.g. amyloidosis). This sequence
 CC represents an HPP fragment of the invention.

 PT Preparing derivatized peptides to enhance mass spectral analysis of
 PT peptide by providing composition comprising peptide and labeling N-
 PT terminus of peptide with compound chosen from acetamidine and
 PT propionamide group.
 XX
 PS Example 3; SEQ ID NO 29; 53pp; English.
 XX
 CC The invention relates to a method of preparing (M1) derivatized peptides
 CC to enhance mass spectral analysis of peptide-containing compositions,
 CC comprising providing a composition comprising a peptide and labeling the
 CC N-terminus of the peptide with a compound chosen from an acetamidine group
 CC and a propionamide group. Also disclosed are: a set of modified tryptic
 CC peptides (I) comprising a first and second pool of peptides, where the N-
 CC terminus of the first and second pool peptides are labeled with an
 CC acetamidine group and a propionamide group, respectively; and a method
 CC of identifying a protein or peptide by searching a genomic database using
 CC sequence information derived by directly interpreting mass spectral data.
 CC (M1) further involves blocking lysine residues of the peptide or protein
 CC with guanidiniumurea. The guanidiniumurea is performed with S-
 CC methylisothiourea or O-methylisourea. N-termini are labeled with an
 CC acetamidine group utilizing S-methyl thioacetimidate. N-termini are
 CC labeled with a propionamide group utilizing S-methyl
 CC thiopropionimidate. (M1) further involves dividing the peptide
 CC composition into first and second pool of peptides, where the labeling
 CC step involves labeling the N-terminus of the peptides of the first pool of
 CC peptides with an acetamidine or amide group and labeling the N-terminus
 CC of the peptides of the second pool of peptides with a propionamide or
 CC amide group. The present sequence represents a peptide used to
 CC demonstrate the method of the invention.

PT Composition containing lens antigen or microorganism that expresses it -
PT used to treat or prevent cataract by reducing the level of antibodies
PT directed against lens protein.
XX
PS Example 4; Page 31; 36pp; English.
XX
XX This sequence is an internal fragment of human beta-B2-crystallin. 17
CC peptides constituting beta-B2-crystallin were synthesised and subjected
CC to competitive inhibition assay of beta-B2-crystallins and respective
CC oligopeptides. As a result, only peptide fragment amino acid residues 157
CC -173 showed a strong binding inhibitory effect on beta-B2-crystallin.
CC This suggests that the binding site (epitope) of beta-B2-crystallin to
CC the antibody was present in this region (157-173). Lens antigens of
CC sequence of amino acids numbers 162-166 of beta-B2-crystallin or a
CC microorganism that can express a lens antigen are used in a
CC pharmaceutical composition. The composition can be used to prepare an
CC inhibitor of an increase of anti-lens protein antibodies. The
CC composition, and the inhibitor can be used to treat, prevent or delay the
CC onset of cataract. Cataract is considered to be the result of autoimmune
CC damage to lens epithelial cells induced by lens protein

XX for isolating homologous genes, e.g. in tumor cells, which provide more
XX specific targets for tumor therapy.
XX Disclosure; Col 35, 65pp; English.
XX This sequence represents a fragment of a protein tyrosine phosphatase
XX (PTP). It was used to isolate the PST phosphatase interacting protein
XX (PSTPIP) sequence of the invention. The protein is a protein tyrosine
XX phosphatase that possesses a non-catalytic domain comprising a proline,
XX serine and threonine rich region and a C-terminal segment of 20 amino
XX acid (aa's) rich in proline, and defines an SH3 binding domain. Nucleic
XX acid encoding native PSTPIP molecules can be used to isolate homologous
XX genes specifically expressed in tumour cells, which might provide more
XX specific targets for tumour therapy. The DNA is also useful for the
XX preparation of PSTPIP polypeptides by recombinant techniques and as
XX hybridisation probes for searching cDNA and genomic libraries for the
XX coding sequence of other PSTPIP polypeptide analogues in other species

XX Novel PST phosphatase interacting protein useful for inducing of PST
XX polymerization of actin monomers and for identifying homolog of PST
XX phosphatase interacting protein.
XX Disclosure; Col 34, 48pp; English.
XX AAB08487-90 represent peptides derived from protein tyrosine phosphatase
XX (PTP). They were used to identify interaction domains of a murine protein
XX tyrosine phosphatase (PTP) phosphatase interacting protein (PSTPIP).
XX PSTPIP polypeptides are bound by and dephosphorylated by the PEST family
XX of protein tyrosine phosphatases. PSTPIP associates with actin. PSTPIP is
XX useful for inducing the polymerisation of actin monomer in eukaryotic
XX cells by introducing the polypeptide into the cell. The polypeptide is
XX useful for identifying and isolating PSTPIP homologues in another
XX mammalian species, in screening assays to identify antagonists and
XX agonists of native PSTPIP polypeptide and as molecular weight markers on
XX protein gels. The PSTPIP nucleic acid is useful for tissue typing of
XX specific mammalian tissues, for preparing PSTPIP polypeptides by
XX recombinant techniques, as hybridisation probes for searching cDNA and
XX genomic libraries for the coding sequence of other PSTPIP analogues and
XX to isolate homologous genes specifically expressed in tumour cells.
XX Antagonists of PSTPIP peptide are useful for inhibiting biological
XX activity of the peptide. Antibodies of PSTPIP are useful to identify
XX rapidly dividing cells and are used to image tumours comprising such
XX rapidly dividing cells

XX Encapsulation of plasmid DNA (lipogenes) and therapeutic agents with
PT nuclear localization signal/fusogenic peptide conjugates into targeted
PT liposome complexes.
XX
XX
PS Claim 14; Page 62; 107pp; English.
XX
XX The present invention describes a method for producing micelles with
CC entrapped therapeutic agents. The method comprises: (1) combining
CC negatively charged agent with a cationic lipid in a ratio where 30-90 %
CC of the negatively charged atoms are neutralised by positive charges on
CC lipid molecules to form an electrostatic micelle complex in 20-80 %
CC ethanol; and (2) combining the micelle complex of (a) with fusogenic-
CC karyophilic peptide conjugates in a 0.0-0.3 ratio, therefore producing
CC micelles with entrapped therapeutic agents. Also described is a method
CC for delivering a therapeutic agent in vivo, comprising the administration
CC of the micelle. ABB74256 to ABB74858 represent specifically claimed
CC nuclear localisation signal (NLS) peptides for use in the method as the
CC fusogenic-karyophilic peptides. The micelles produced can have cytostatic
CC and antitumour activities. The peptide-lipid-polynucleotide complexes
CC produced are useful for inhibiting the progression of neoplastic
CC diseases. The invention relates to the field of gene therapy and is
CC directed toward methods for producing peptide-lipid-polynucleotide
CC complexes suitable for delivery of polynucleotides. The encapsulated
CC molecules display therapeutic efficacy in eradicating solid tumours
CC including but not limited to breast carcinoma or prostate carcinoma.
CC ABB74235 to ABB74255 are used in the exemplification of the present
CC invention

XX
XX The present invention describes a method for producing micelles with
CC entrapped therapeutic agents. The method comprises: (1) combining
CC negatively charged agent with a cationic lipid in a ratio where 30-90 %
CC of the negatively charged atoms are neutralised by positive charges on
CC lipid molecules to form an electrostatic micelle complex in 20-80 %
CC ethanol; and (2) combining the micelle complex of (a) with fusogenic-
CC karyophilic peptide conjugates in a 0.0-0.3 ratio, therefore producing
CC micelles with entrapped therapeutic agents. Also described is a method
CC for delivering a therapeutic agent in vivo, comprising the administration
CC of the micelle. ABB74256 to ABB74858 represent specifically claimed
CC nuclear localisation signal (NLS) peptides for use in the method as the
CC fusogenic-karyophilic peptides. The micelles produced can have cytostatic
CC and antitumour activities. The peptide-lipid-polynucleotide complexes
CC produced are useful for inhibiting the progression of neoplastic
CC diseases. The invention relates to the field of gene therapy and is
CC directed toward methods for producing peptide-lipid-polynucleotide
CC complexes suitable for delivery of polynucleotides. The encapsulated
CC molecules display therapeutic efficacy in eradicating solid tumours
CC including but not limited to breast carcinoma or prostate carcinoma.

PT Generating divergent libraries of chimeric proteins, comprises
PT transfecting a host with a polynucleotide obtained by recombination
PT between nucleotides encoding consensus amino acid sequences.
XX
XX Disclosure; SEQ ID NO 122; 60pp; English.

XX This invention relates to a novel method for generating divergent

CC libraries of recombinant chimeric proteins. Specifically, it refers to a

CC method that induces recombination between several distinct, uniform and

CC predefined regions of overlapping polynucleotides encoding sequences with

CC consensus polypeptides that correspond to sequences conserved in several

CC related proteins. As such, this provides a route by which to produce

CC chimeric polynucleotides, which can then be transfected into a host with

CC the polynucleotides. The present invention describes using this method

CC	for generating divergent libraries of several recombinant chimeric
CC	proteins to enable production of recombinant chimeric proteins in a less
CC	expensive, less labor-intensive and more efficient procedure. The
CC	shuffling between variable regions are essentially devoid of sequence
CC	homology, and it maintains the consensus backbone, increases the
CC	production of active enzymes while retaining high diversity and improved
CC	properties, thus, it is more favorable and generates important enzyme
CC	variants. In particular, it refers to the creation of a recombinant
CC	library of chimeric lipase proteins using four parental lipase genes from
CC	various Candida species that share little DNA homology but exhibit
CC	notable protein similarity. A second recombinant library refers to
CC	chimeric chitinase A/ chitinobiose proteins. This peptide sequence is
CC	identified as a conserved region between Serratia marcescens chitinase A
CC	and chitinobiose (beta-N-acetylhexosaminidase) proteins, given in figure 7
CC	of the invention.

PT	New conjugate used for treating aberrant cellular activation, migration,
PT	proliferation or survival condition such as cancer, comprises drug and
PT	substrate for protein or lipid kinase linked to protein, optionally by
PT	non-releasable linker.
XX	
PB	Disclosure; SEQ ID NO 803; 407bp; English.

XX	The invention relates to a conjugate (I) comprising a drug and a substrate for a protein kinase or a lipid kinase non-releasably linked to it, optionally by a non-releasable linker. Also included are preparing
CC	pacitaxel C10 carbamate of formula (8a) (which comprises reacting a
CC	pacitaxel compound of formula (5a) with a carboximidamide compound and
CC	reacting the obtained compound of formula (6a) with an amine of formula
CC	X, all formulae given in the specification), a pharmaceutical composition
CC	(PCT) comprising (I) and a carrier, an article (comprising packaging
CC	material, (I) or its derivatives, for treatment/prevention/amelioration
CC	of one or more symptoms (associated with aberrant cellular activation,
CC	migration, proliferation or survival (ACAMPS) and a label that indicates
CC	that (I) is used for treatment, prevention or amelioration of one or more
CC	symptoms associated with ACAMPS), and a peptide comprising an kinase
CC	substrate peptide. The conjugate has improved cytotoxic selectivity index
CC	as compared to an unconjugated drug. The conjugate is useful for treating
CC	conditions caused by ACAMPS characterized by undesirable or aberrant
CC	activation, migration, proliferation or survival of tumor cells,
CC	endothelial cells, B cells, T cells, macrophages, neutrophils,
CC	eosinophils, basophils, monocytes, platelets, fibroblasts, other
CC	connective tissue cells, osteoblasts, osteoclasts and progenitors of
CC	these cell types. The ACAMPS condition is a cancer, coronary arteriosclerosis,
CC	aortic atherosclerosis, chronic inflammation or autoimmunity disease. The
CC	autoimmune disease is rheumatoid arthritis, asthma, psoriasis,
CC	inflammatory bowel disease, systemic lupus erythematosus, systemic
CC	dermatomyositis, inflammatory ophthalmic diseases, autoimmune hematologic
CC	disorders, multiple sclerosis, vasculitis, idiopathic nephrotic syndrome,
CC	transplant rejection or graft versus host disease. The cancer is non-
CC	small cell lung cancer, head squamous cancer, neck squamous cancer,
CC	colorectal cancer, prostate cancer, breast cancer, acute lymphocytic
CC	leukemia, adult acute myeloid leukemia, adult non-Hodgkin's lymphoma,
CC	brain tumor, cervical cancer, childhood cancer, childhood sarcoma,
CC	chronic lymphocytic leukemia, chronic myeloid leukemia, esophageal
CC	cancer, hairy cell leukemia, kidney cancer, liver cancer, multiple
CC	myeloma, neuroblastoma, oral cancer, pancreatic cancer, primary central
CC	nervous system lymphoma, skin cancer or small-cell lung cancer. The
CC	cancer is brain stem glioma, cerebellar astrocytoma, cerebral
CC	astrocytoma, ependyoma, Ewing's sarcoma, germ cell tumor, Hodgkin's
CC	disease, acute myelogenous leukemia, acute lymphoblastic leukemia, liver
CC	cancer, medullablastoma, neuroblastoma, non-Hodgkin's lymphoma,
CC	osteosarcoma, malignant fibrous histiocytoma of bone, retinoblastoma,
CC	rhabdomyo sarcoma, soft tissue sarcoma, supratentorial primitive
CC	neuroectodermal and pineal tumors, visual pathway and hypothalamic
CC	glioma, Wilms' tumor or other childhood kidney tumor. The cancer is
CC	originated from or has metastasized to the bone, brain, breast, digestive
CC	and gastrointestinal system, endocrine system, blood, lung, respiratory
CC	system, thorax, musculoskeletal system, or skin. The cancer is selected
CC	from breast cancer, lung cancer, prostate cancer, ovarian cancer,
CC	esophageal cancer, bladder cancer, hepatoma, neuroblastoma, lymphoma,
CC	testicular cancer, renal cancer, leukemia, colorectal cancer and head and
CC	neck cancer. The conjugate is useful for identifying kinase substrates
CC	capable of selectively accumulating in a target system. The conjugate is
CC	useful for identifying conjugates capable of exhibiting selective
CC	toxicity against a target system. The conjugate is useful for enhancing
CC	drug efficiency. The present sequence is kinase substrate peptide useful
CC	in the conjugate of the invention.

 CC This invention describes novel antibodies that immunospecifically bind to
 CC B lymphocyte stimulator (Blys) polypeptides. Blys is a member of the
 CC tumour necrosis factor (TNF) super family and induces B cell
 CC proliferation and differentiation. The antibodies of the invention have
 CC cytostatic, immunosuppressive, immunostimulant, immunomodulatory,
 CC antineumatic and antiAIDS activity and can be used in vaccines to
 CC inhibit the expression and activity of Blys. The antibodies bind to Blys
 CC and so may be used to detect and quantitate the presence of Blys in
 CC biological samples and may be used in this way to diagnose disease
 CC associated with aberrant expression of Blys. They may also be
 CC administered to treat diseases associated with aberrant Blys expression
 CC and activity such as cancer, immune, and autoimmune disorders and
 CC diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis,
 CC immunodeficiency (e.g. common variable immunodeficiency (CVID) and
 CC acquired immunodeficiency syndrome (AIDS)). ABP4390-ABP47228 represent
 CC the antibodies and fragments of the antibodies described in the method of
 CC the invention

 XX
 PS Example 1; SEQ ID NO 2501; 394pp; English.
 XX
 CC This invention relates to novel antibodies that immunospecifically bind
 CC to B lymphocyte stimulator (Blys). The Blys gene has been mapped to
 CC chromosome 13q34 and encodes a protein that is a member of the tumour
 CC necrosis factor superfamily and induces both in vivo and in vitro B cell
 CC proliferation and differentiation. Specifically, it refers to single
 CC chain antibody molecules (scFvs) derived, preferably, from the variable
 CC heavy CDR3 region that immunospecifically bind to a polypeptide, or
 CC fragment thereof, of either human, murine, rat or monkey Blys. The
 CC present invention refers to the use of such antibodies in various methods
 CC for the detection, diagnosis and prognosis of diseases related to the
 CC aberrant expression or inappropriate function of Blys or its receptor. As
 CC such, these compositions are useful for identifying immune disorders
 CC including myasthenia gravis and multiple sclerosis, inflammatory
 CC disorders e.g. asthma and rheumatoid arthritis, infectious diseases such
 CC as AIDS and proliferative disorders including leukaemia, carcinoma and
 CC lymphoma. Accordingly, they can be described as exhibiting various
 CC activities such as antineumatic, antineumatic, neuroprotective,
 CC antiinflammatory, antineumatic, antiallergic and cytostatic. This
 CC peptide sequence is a single chain antibody variable heavy CDR3 peptide
 CC that immunospecifically binds Blys of the invention.

PT	Stimulating CD8 or CD4 T cells for the immuno-stimulation of mammals and
PT	the determination of the response to the antigen comprises using a
PT	synthetic peptide library of the specific antigen.
XX	
PS	Example; Fig 1; 85pp; German.
XX	
CC	This sequence represents a novel method for stimulating CD8 or CD4 T
CC	cells for the immuno-stimulation of mammals and the determination of the
CC	response to an antigen (I). The method comprises (i) dividing the amino
CC	acid sequence of the antigen into protein fragments (II) of at least 9
CC	amino acids, whereby adjacent or neighbouring fragments are in the whole
CC	antigen sequence; (ii) synthesizing a peptide library containing (ii);
CC	and (iii) incubating the CD8 and/or CD4 T lymphocytes in a suspension
CC	comprising (II) in a single culture vessel. The method is used to immuno-
CC	stimulate T cells of mammals, particularly humans, and is also useful for
CC	diagnostic purposes to determine if a mammal, especially human, has
CC	previously immunologically responded to a specific protein, and to
CC	determine strength of that response. The method is suitable for in vivo
CC	or in vitro immuno-stimulation of mammalian, more preferably human T
CC	lymphocytes, where the stimulated T lymphocytes are expanded and can be
CC	transfused into a patient. AAB86544-AAB86803 represent fragments of the
CC	human cytomegalovirus IE1 and pp65 lower matrix phosphoprotein which are
CC	used to illustrate the method of the invention

 XX
 PT Src homology region 3 binding peptide - used to activate Src tyrosine
 PT kinase(s) and to stimulate immune response by increasing production of
 PT certain lymphokine(s), e.g. interleukin-1.
 XX
 PS Claim 17; Page 99; 131pp; English.

The present sequence represents a Src homology region 3 (SH3) binding
 CC peptide. SH3 binding peptides are selected from: (a) peptides which bind
 CC the SH3 domain of Cortactin, (b) peptides which bind the middle SH3
 CC domain of Nck; (c) peptides which bind the SH3 domain of Abl; (d)
 CC peptides which bind the SH3 domain of Src; (e) peptides which bind the
 CC SH3 domain of PLC gamma; (f) peptides which bind the SH3 domain of p53bp2
 CC ; (g) peptides which bind the amino-terminal SH3 domain of Ctk; (h)
 CC peptides which bind the SH3 domain of Yes; and (i) peptides which bind
 CC the amino-terminal SH3 domain of Grb2. The purified binding peptides can
 CC be used in the method to identify inhibitors of their binding to their
 CC respective SH3 domains, which could be used to modulate the
 CC pharmacological activity of proteins or polypeptide containing the SH3
 CC domain. The peptides can also be used to activate Src or Src-related
 CC protein tyrosine kinases, to stimulate the immune response by increasing
 CC the production of certain lymphokines, e.g. tumour necrosis factor-alpha
 CC and interleukin-1, or to deliver a conjugated molecule to certain
 CC cellular compartments containing Src or Src related proteins

 PT New recombinant fusion protein comprising detection and first
 PT localisation domains and a binding domain for the molecule of interest,
 PT useful for detecting binding of a molecule of interest.

XX
 PS Claim 20; SEQ ID NO 244; 10pp; English.

XX
 CC The present invention describes a recombinant fusion protein (1) for
 CC detecting binding of a molecule of interest. (1) comprises: (a) a
 CC detection domain; (b) a first localisation domain; and (c) a binding
 CC domain for the molecule of interest. The detection domain, the first
 CC localisation domain and the binding domain for the molecule of interest
 CC constituting the recombinant fusion protein for detecting binding of a
 CC molecule of interest are operably linked. The binding domain for the
 CC molecule of interest is separated from the first localisation domain by 0
 CC -20 amino acid residues. The first localisation domain and the binding
 CC domain for the molecule of interest both do not occur in a single non-
 CC recombinant protein with the same spacing as in the recombinant fusion
 CC protein for detecting binding of a molecule of interest. Also described:
 CC (1) a recombinant nucleic acid encoding the recombinant fusion protein;
 CC (2) a recombinant expression vector comprising the nucleic acid control
 CC sequences operably linked to the recombinant nucleic acid molecule; (3) a
 CC genetically engineered host cell transfected with the recombinant
 CC expression vector; (4) a kit for detecting binding of the molecule of
 CC interest; and (5) a method for identifying compounds that alter the
 CC binding of the molecule of interest. The recombinant fusion protein is
 CC useful for detecting binding of a molecule of interest. The recombinant
 CC fusion protein eliminates the need to construct two or more chimeric
 CC proteins and enables the monitoring of biochemical events in live, intact
 CC or fixed cells. The present sequence is used in the exemplification of
 CC the present invention.

PT Identifying cell surface molecules with differential expression in
PT malignant cells, by comparing expression of mRNA in malignant cells and
PT normal tissue, and selecting nucleic acid sequences encoding the
PT molecules.

PS Disclosure; SEQ ID NO 374; 223pp; English.

XX The invention relates to a novel method for identifying cell surface
XX molecules expressed at different levels in malignant cells. The method
XX involves providing at least 3 malignant cell lines and 3 total RNA
XX samples derived from normal tissue, comparing expression of mRNA in cell
XX lines and normal tissue, identifying nucleic acid sequences for a
XX difference in amount of mRNA expressed in cell lines and normal tissue,
XX and selecting nucleic acid sequences encoding for the cell surface
XX molecules. The cell surface molecule compositions have cytostatic and
XX immunostimulant activities. The cell surface molecule proteins can be
XX used to create a vaccine and their encoding nucleic acids used in gene
XX therapy. The specific binding partner, capable of associating with the
XX cell surface molecules, is useful for the preparation of a targeting
XX complex, comprising a binding partner capable of binding the cell surface
XX molecules. The targeting complex is useful in the treatment of
XX premalignant and/or malignant conditions in an individual. The condition
XX includes cancer selected from melanoma, brain tumour (e.g. glioblastoma,
XX neuroblastoma, astrocytoma, oligodendroglioma, meningioma,
XX medulloblastoma, neuroma, ependymoma, craniopharyngioma, pineal tumour,
XX germ cell tumour and schwannoma), breast cancer, lung cancer (e.g. small
XX cell lung cancer (SCLC) and non-small cell lung cancer (NSCLC)), prostate
XX cancer, cervix cancer, uterine cancer, ovarian cancer, leukaemia, colon
XX cancer, rectum cancer and bladder cancer. The targeting complex is useful
XX for the preparation of a premalignant and/or malignant conditions in an
XX individual in need of it. This sequence represents a nuclear targeting
XX peptide of the invention.

PT Synthetic antimicrobial polypeptides for use as antimicrobials.

PS Disclosure; SEQ ID NO 58; 113pp; Japanese.

XX This invention relates to a novel method of synthesising artificial
XX antimicrobial polypeptides. Specifically, these are peptides that each
XX comprise at least one nuclear localisation sequence (NLS) or modified
XX NLS. Furthermore, each NLS unit consists of at least 5 amino acids and
XX makes up at least 30% of the total amino acids of the peptide. As such,
XX the present invention describes the oligonucleotides encoding these
XX antimicrobial peptides that are effective against a wide range of gram
XX positive and gram negative bacteria including Klebsiella pneumoniae,
XX Bacillus subtilis and Salmonella enteritidis. This peptide sequence
XX represents a peptide from which the novel artificial antimicrobial
XX peptides were derived in an exemplification of the invention.

 XX
 PT New isolated antigenic peptides e.g., for G protein-coupled receptors
 PT (GPCR), useful for diagnosing and designing drugs for treating conditions
 PT in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or
 PT autoimmune diseases.
 XX
 PS Claim 1; Fig 2; 523pp; English.
 XX
 CC The present invention describes antigenic peptides (1) comprising: (a)
 CC any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino
 CC acids. Also described: (1) an assay for the detection of a particular G
 CC protein-coupled receptor (GPCR) or a candidate polypeptide in a sample;
 CC and (2) an isolated antibody having high specificity and high affinity or
 CC avidity for a particular GPCR. (1) can be used as GPCR modulators and in
 CC gene therapy. The antigenic peptides for GPCRs are useful in detecting an
 CC antibody against a particular GPCR, and in the production of specific
 CC antibodies. The peptides and antibodies are also useful for detecting the
 CC presence or absence of corresponding GPCRs. The antigenic peptides for
 CC GPCRs and antibodies are useful for diagnosing and designing drugs for
 CC treating immune-related diseases, growth-related diseases, cell
 CC regeneration-related diseases, immunological-related cell proliferative
 CC diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease,
 CC atherosclerosis, bacterial, fungal, protozoan or viral infections,
 CC osteoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute
 CC inflammation, allergies, Crohn's disease, diabetes, graft versus host
 CC disease, Parkinson's disease, multiple sclerosis, pain, psoriasis,
 CC anxiety, depression, schizophrenia, dementia, mental retardation, memory
 CC loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension,
 CC hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or
 CC any other disorder in which GPCRs are involved. The antibodies may be
 CC used in immunoassays and immunodiagnosis. ABZ42523 to ABZ42869 encode
 CC GPCR proteins given in ABP81675 to ABP82018, which are used in the
 CC exemplification of the present invention

PT Prognosis of solid tumours e.g. breast carcinoma - based on detection of
PT OA-519 protein or mRNA in histological sections and biological fluids.
XX
PS Example 12; Col 39; 50pp; English.
XX
CC The present sequence represents an OA-519 peptide fragment from an
CC example of the present invention. The present invention describes a
CC method and a kit for screening human samples to aid in determining the
CC prognosis of breast carcinoma. The kit comprises in one or more
CC containers: an antibody which specifically binds to one or more epitopes
CC found on the sequence: Leu Tyr Ser Gly Asn Asp Val Thr Asp Ile Ser Asp
CC Asp Arg Phe Pro Lys Pro Glu Ile Ala Asn Gly Tyr Val Glu Lys Leu Phe
CC Arg Tyr Glu Cys but not found on haptoglobin 1 or 2; and a reagent for
CC detecting the antibody. The method comprises providing a histologic
CC section from the tumour, and contacting the section with an antibody (as
CC described above), and determining whether the antibody specifically binds
CC to the section in cytoplasmic cellular regions, where the presence of the
CC antibody binding correlates with a worsened prognosis of the solid
CC tumour. The method is useful for the prognosis of solid tumours,
CC especially breast carcinomas and prostatic adenocarcinomas. (Updated on
CC 25-MAR-2003 to correct PR field.)

 PT New PE8T-type protein tyrosine phosphatase interacting polypeptide -
 PT nucleic acids and vectors; for inducing the polymerisation of actin
 PT monomers in eukaryotic cells and identifying antagonists.
 CC
 PS Disclosure; Page 37; 111pp; English.
 XX
 CC The present sequence represents a peptide from the present invention
 CC which describes murine tyrosine phosphorylated cleavage furrow-
 CC associated protein (PSTRIP), which is a PE8T-type protein tyrosine
 CC phosphatase (PTP)-interacting polypeptide. PSTRIP induces the
 CC polymerisation of actin monomers in a eukaryotic cell, by introducing a
 CC vector containing the nucleic acid sequence encoding PSTRIP into the
 CC cell. Assays for identifying (ant)agonists of PSTRIP comprise contacting
 CC PSTRIP with the agent and monitoring the ability of PSTRIP to induce
 CC actin polymerisation

 PT New anti-OA-519 antibodies - useful as diagnostic and prognostic markers
 PT for human solid tumours, particularly breast cancers.
 CC
 PS Example 12; Col 25; 51pp; English.

XX Peptides AAW96750-53 are derived from the OA-519 protein. The
 CC specification describes monoclonal antibodies which specifically bind an
 CC epitope found on OA-519 but not on hapctogloblin 1 (Hg1) or Hg2 or,
 CC optionally hapctogloblin related protein (hpr) gene product. The antibodies
 CC can be used to detect OA-519 which is useful as a diagnostic marker in
 CC human solid tumours and for predicting the propensity for tumour invasion
 CC and early metastasis, particularly with breast cancers. They can detect
 CC aggressive tumour cells which result in decreased survival, increased
 CC metastasis, increased rates of clinical recurrence and overall worsened
 CC prognosis. The antibodies can also be used to purify hapctogloblin related
 CC (hpr) proteins

CC The present sequence represents a peptide derived from a protein that is
 CC immunologically cross-reactive with the haptoglobin related (hpr) gene
 CC product from breast cancer cells. The specificfication also describes a
 CC peptide that is immunologically cross-reactive with polyclonal antibodies
 CC that specifically bind the hpr gene product. The peptide can be used to
 CC raise antibodies specific for a protein that is immunologically cross-
 CC reactive with the hpr gene product but not with haptoglobin 1 or
 CC haptoglobin 2. The peptide is found in the cytoplasm of breast carcinoma
 CC cells and is a useful diagnostic marker in human solid tumours for
 CC predicting the propensity for tumour invasion and early metastasis

PT Novel genes encoding protein tyrosine phosphatase binding proteins useful
 PT for isolating homologous genes, e.g. in tumor cells, which provide more
 PT specific targets for tumor therapy.

PS Disclosure; Col 35; 65pp; English.

XX This sequence represents a fragment of a protein tyrosine phosphatase
 CC (PTP). It was used to isolate the PTP phosphatase interacting protein
 CC (PSTPIP) sequence of the invention. The protein is a protein tyrosine
 CC phosphatase that possesses a non-catalytic domain comprising a proline,
 CC serine and threonine rich region and a C-terminal segment of 20 amino
 CC acid (aa 8) rich in proline, and defines an SH3 binding domain. Nucleic
 CC acids encoding native PSTPIP molecules can be used to isolate homologous
 CC genes specifically expressed in tumour cells, which might provide more
 CC specific targets for tumour therapy. The DNA is also useful for the
 CC preparation of PSTPIP polypeptides by recombinant techniques and as
 CC hybridisation probes for searching cDNA and genomic libraries for the
 CC coding sequence of other PSTPIP polypeptide analogues in other species

PT Novel PST phosphatase interacting protein useful for inducing
 PT polymerization of actin monomers and for identifying homolog of PST
 PT phosphatase interacting protein.

PS Disclosure; Col 34; 48pp; English.

XX AAB08487-90 represent peptides derived from protein tyrosine phosphatase
 CC (PTP). They were used to identify interaction domains of a murine protein
 CC tyrosine phosphatase (PTP) phosphatase interacting protein (PSTPIP).
 CC PSTPIP polypeptides are bound by and dephosphorylated by the PST family
 CC of protein tyrosine phosphatases. PSTPIP associates with actin. PSTPIP is
 CC useful for inducing the polymerisation of actin monomer in eukaryotic
 CC cells by introducing the polypeptide into the cell. The polypeptide is
 CC useful for identifying and isolating PSTPIP homologues in another
 CC mammalian species, in screening assays to identify antagonists and
 CC agonists of native PSTPIP polypeptide and as molecular weight markers on
 CC protein gels. The PSTPIP nucleic acid is useful for tissue typing of
 CC specific mammalian tissues, for preparing PSTPIP polypeptides by
 CC recombinant techniques, as hybridisation probes for searching cDNA and
 CC genomic libraries for the coding sequence of other PSTPIP analogues and
 CC to isolate homologous genes specifically expressed in tumour cells.
 CC Antagonists of PSTPIP peptide are useful for inhibiting biological
 CC activity of the peptide. Antibodies of PSTPIP are useful to identify
 CC rapidly dividing cells and are used to image tumours comprising such
 CC rapidly dividing cells

PT Characterizing phosphorylated polypeptides in a sample comprises
PT digesting the polypeptides with a protease thus generating test peptides,
PT and collecting a fraction of test peptides that enriched for positively
PT charged peptides.
XX
PS Claim 16; Page 87; 123pp; English.
XX
XX The invention relates to characterizing phosphorylated polypeptides in a
XX sample comprising digesting the polypeptides with a protease thus
XX generating test peptides, and collecting a fraction of test peptides that
XX enriched for positively charged peptides. Also included are a method
XX (comprising determining the presence, absence or level of one or more
XX phosphorylated peptides as identified above in cells having a cell state
XX and determining the degree of correlation between the presence, absence
XX or level of phosphorylated polypeptide with the cell state), an isolated
XX peptide of 5-50 amino acids comprising an amino acid sequence that is a
XX subsequence of any of the protein sequences given in the specification
XX (and which comprise a phosphorylation site within the subsequence), an
XX isolated polypeptide selected from any of the polypeptides listed in the
XX specification and is modified at a modification site, an isolated peptide
XX comprising a mass spectral peak signatures, a method for identifying a
XX treatment that modulates phosphorylation of an amino acid in a target
XX polypeptide, a method for generating a peptide standard, a pair of
XX peptide standards comprising the peptide obtained (where the peptide is
XX phosphorylated and a corresponding peptide comprising an identical amino
XX acid sequence but which is not phosphorylated), a system (comprising a
XX computer memory comprising data files storing information relating to the
XX identifying characteristics of positively charged peptides, and a data
XX analysis module capable of executing instructions for organizing and/or
XX searching the data files), a computer program product (comprising data
XX relating to the identifying characteristics of positively charged
XX peptides and comprising instructions for organizing and/or searching the
XX data), and a method for identifying N-terminal peptides in a sample. The
XX method is useful for characterizing phosphorylated polypeptides in a
XX sample. The present sequence is a peptide from a human phosphoprotein,
XX containing a phosphorylation site, identified by the method of the
XX invention.

 PT amphipathic helix of an HCV nonstructural protein with cytoplasmic
 PT membranes of eukaryotic cell.
 XX
 PS Claim 44; Page 17; 43pp; English.
 XX
 XX The invention relates to a novel method for identifying a compound useful
 CC for treating Hepatitis C virus (HCV) infection. The method comprises
 CC assessing the ability of a candidate compound to interfere with the
 CC binding of an amphipathic helix present in the N-terminal region of an
 CC HCV non-structural protein with cytoplasmic membranes of a eukaryotic
 CC cell, where a compound that interferes with the binding is useful for
 CC treating the infection. The compounds of the invention have virucide, and
 CC hepatotropic activity. The peptides may have a use in gene therapy. The
 CC methods and compounds are useful for treating Hepatitis C virus (HCV)
 CC infection. The composition is useful for eliciting an immunological
 CC response against HCV. The peptides are useful for the preparation of a
 CC medicament for the prevention or treatment of HCV infection in a human.
 CC The sequences shown in ABR00747-ABR00754 represent ligands of the
 CC amphipathic helix of the HCV nonstructural protein NS5A

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

-1- FUNCTION: Lectin that binds galactose, galactose-containing sugars
and gentiobiose. It is strongly mitogenic for human T lymphocytes
and induces the release of interleukin-1 beta and tumor necrosis
factor alpha from cultured mononuclear cells. It has a strong
hemagglutinating activity.
-1- SUBUNIT: Homodimer.

```

```

CC -1- DEVELOPMENTAL STAGE: The production of this lectin varies with
CC seasons being higher in late spring.
CC -1- PTM: N-glycosylated.
CC -1- PTM: An isoform with Ala-1 missing is found in 20% of the samples.
CC -1- SIMILARITY: Contains 1 ricin B-type lectin domain.

RA O'Neill P.B., Doolittle R.F.;
RT "Mammalian phylogeny based on fibrinopeptide amino acid sequences.";
RL Synt. 2001. 22:590-595(1973).
CC -1- FUNCTION: Fibrinogen has a double function: yielding monomers that
CC polymerize into fibrin and acting as a cofactor in platelet
CC aggregation.
CC -1- SUBUNIT: Heterohexamer; disulfide linked. Contains 2 sets of 3
CC nonidentical chains (alpha, beta and gamma). The 2 heterocliners
CC are in head to head conformation with the N-termini in a small
CC central domain (By similarity).
CC -1- DOMAIN: A long coiled coil structure formed by 3 polypeptide
CC chains connects the central module to the C-terminal domains
CC (distal modules). The long C-terminal ends of the alpha chains
CC fold back, contributing a fourth strand to the coiled coil
CC structure.
CC -1- PTM: Conversion of fibrinogen to fibrin is triggered by thrombin,
CC which cleaves fibrinopeptides A and B from alpha and beta chains,
CC and thus exposes the N-terminal polymerization sites responsible
CC for the formation of the soft clot.

RN [1]
RP PROTEIN SEQUENCE, STRUCTURE BY NMR, SYNTHESIS, MASS SPECTROMETRY, AND
RP MUTAGENESIS OF ARG-12.
RC TISSUE=Venom;
RX PubMed=12419800; DOI=10.1074/jbc.M210280200;
RA Nicke A., Loughman M.L., Millard E.L., Alewood P.F., Adams D.J.,
RA Daly N.L., Craik D.J., Lewis R.J.;
RT "Isolation, structure, and activity of GID, a novel alpha 4/7-
RT conotoxin with an extended N-terminal sequence."
RL J. Biol. Chem. 278:3137-3144(2003).
CC -1- FUNCTION: Alpha-conotoxins act on postsynaptic membranes, they
CC bind to the nicotinic acetylcholine receptors (nAChR) and thus
CC inhibit them. This peptide reversibly inhibits alpha-7, alpha-
CC 3/beta-2, and alpha-4/beta-2 subunits.
CC -1- SUBCELLULAR LOCATION: Secreted.
CC -1- TISSUE SPECIFICITY: Expressed by the venom duct.
CC -1- MASS SPECTROMETRY: MW=2184.9; METHOD=UNKNOWN; RANGE=1-19;
CC NOTE=Ref.1.
CC -1- SIMILARITY: Belongs to the conotoxin A superfamily. Alpha-type
CC family.
CC -----
CC This Swiss-Prot entry is copyright. It is produced through a collaboration
CC between the Swiss Institute of Bioinformatics and the EMBL outstation -
CC the European Bioinformatics Institute. There are no restrictions on its
CC use as long as its content is in no way modified and this statement is not
CC removed.

PS Claim 3; Page 69; 154pp; English.

XX Sequences AAY52510-Y52522 represent proteolytic fragments of

CC Dermatophagoides farinae high molecular weight mite allergen protein (HMW

CC -map) composition. The HMW-map composition was isolated from a D. farinae

CC homogenate by gel filtration, with each fraction being analysed for the

CC presence of proteins that bound to Ige present in mite-allergic dog

CC antiserum. The HMW-map composition comprises mapA (a 109 kD protein) and

CC mapB (98 kD). Mite allergenic proteins and peptides, and nucleic acids

CC encoding them, may be used in therapeutic compositions to modify an

CC animal's hypersensitivity reaction to mite allergens. Animals that may be

CC treated include mammals and birds, especially felines, canines, equines,

CC humans, other pets, and work or domestic animals. The proteins or

CC fragments may also be used to diagnose allergies via a skin test. The

CC proteins and peptides can also be used to raise antibodies, which have a

CC variety of potential uses. For example, they can be used as vaccines to

CC passively immunise animals against dust mite hypersensitivity, as

CC positive controls in test kits and as tools to recover desired dust mite

CC allergens from a mixture of proteins

PT New mite allergenic protein isolated from Dermatophagoides, designated

XX Der HMW-map protein, useful as a vaccine for treating mite allergy.

XX Claim 12; Page 70; 161pp; English.

XX The invention relates to an isolated mite allergenic protein of

CC Dermatophagoides, designated Der HMW-map protein, and its related nucleic

CC acid. The Der HMW-map protein is useful for eliciting an immune response

CC against Der HMW-map protein. The protein or a reagent comprising a non-

CC proteinaceous epitope is useful for identifying an animal (e.g., dog,

CC cat) susceptible to or having an allergic response to a mite. A

CC therapeutic composition is useful for desensitising a host animal to an

CC allergic response to a mite. The DNA and protein can be used in the

CC detection of anti-Der HMW-map antibodies in animal fluids, and inhibition

CC of immunoglobulin (Ig)E or Der HMW-map protein activity associated with a

CC disease. Antibodies that bind to Der HMW-map are useful for inhibiting

CC binding of proteins to IGE, to prevent immunocomplex formation, thus

CC reducing hypersensitivity responses to mite allergens, and as vaccines

CC against mite allergen hypersensitivity. Sequences AAU96314-AAU96342

CC represent Der HMW-map polypeptides of the invention

XX Human genome-derived single exon nucleic acid probes useful for analyzing
XX PT gene expression in human cervical epithelial cells.
XX
XX Claim 27; SEQ ID NO 23724; 487pp; English.
XX
XX The present invention relates to human single exon nucleic acid probes
XX (SENP: see AAI10068-AA128459). The present sequence is a peptide encoded
XX by one such probe. The SENPs are derived from human HeLa cells. The SENPs
XX can be used to produce a single exon microarray, which can be used for
XX measuring human gene expression in a sample derived from human cervical
XX epithelial cells. By measuring gene expression, the probes are therefore
XX useful in grading and/or staging of diseases of the cervix, notably
XX cervical cancer. Note: The sequence data for this patent did not form
XX part of the printed specification, but was obtained in electronic format
XX directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX
PT Human genome-derived single exon nucleic acid probes useful for analyzing
XX gene expression in human adult liver.
XX
PS Claim 27; SEQ ID NO 31513; 650bp; English.
XX
CC The invention relates to a single exon nucleic acid probe (SENP) (i) for
CC measuring human gene expression in a sample derived from human adult
CC liver, comprising one of 13109 defined nucleotide sequences given in the
CC specification (or complements/ fragments). The probe hybridises at high
CC stringency to a nucleic acid molecule expressed in the human adult liver.
CC (i) may be used for predicting, measuring and displaying gene expression
CC in samples derived from human adult liver. The genes identified may be
CC involved in genetic liver diseases such as cirrhosis,
CC hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
CC associated with coronary heart disease. ABG47348-ABG59930 represent human
CC liver single exon encoded peptides of the invention. Note: The sequence
CC information for this patent does not appear in the printed specification
CC but was obtained in electronic format directly from WIPO at

PT New peptides that bind to carotenoid compounds, useful as detergents for
PT targeting or removing stains on textiles or fabrics, in personal care or
PT food industry applications, or in various diagnostic applications.
XX
PS claim 1; SEQ ID NO 54; 107pp; English.
XX
CC The invention relates to 432 cyclic or linear carotenoid-binding phage
CC display peptides (ADY56178-ADY56609); to carotenoid-binding peptides
CC which comprise a repeatable motif selected from PPP, SSP, SSK, SPT, PLP,
CC SLH, SPT, TTT, NTS, APS, TPV or a motif shown in ADY5623-ADY5651; and
CC to a complex comprising a phenol-oxidizing enzyme (especially a
CC stachybotrya laccase such as ADY56177 or variants thereof) covalently
CC attached to one of the 432 carotenoid-binding peptides. The invention
CC also relates to polynucleotides encoding a carotenoid-binding peptide,
CC and expression vectors and host cells comprising a polynucleotide
CC encoding a phenol-oxidizing enzyme/carotenoid-binding peptide complex.
CC The carotenoid-binding peptides are useful in complexes with a phenol-
CC oxidizing enzyme for enhancing the selectivity of the enzyme to a target
CC carotenoid stain on a textile or other surface, where the enzyme can then
CC act to bleach the stain. Such enzyme/peptide complexes can be used in
CC detergent or cleaning compositions for targeting or removing food stains
CC (e.g., tomato or paprika) on fabrics, and can also be used in the textile
CC industry in the treatment, processing, finishing, polishing or production
CC of fibers. The enzyme/peptide complexes are additionally useful in
CC personal care applications (e.g., in skin cosmetics as skin tanners), in
CC food industry applications (e.g., as fruit ripening agents) or in
CC diagnostic uses, such as in pharmaceutical applications e.g., to localize
CC the presence of carotenoids in tissues. The present sequence represents a
CC specifically claimed carotenoid-binding cyclic peptide isolated from a
CC phage display library.

 PT Prostate Specific Antigen peptide(s) - useful for diagnosis of prostate
 PT cancer.
 XX
 PS Claim 2, Page 10, 42pp; English.
 XX
 CC AAW30769-84 are synthetic peptides derived from the prostate specific
 CC antigen (PSA) sequence. These peptides are identical to a highly

CC immunogenic region of PSA, and also comprise one or more amino acids
 CC identical or non-identical to the amino acid sequence of human glandular
 CC kallikrein (hK2). The peptides are used as antigens for the production of
 CC antibodies (hK2). The peptides are used to detect PSA in a test sample (claimed). This
 CC is useful for diagnosis of prostate cancer. The peptides enable the
 CC production of antisera necessary to determine the amount of total PSA,
 CC free PSA and PSA-ACT complex present in a sample and thus improve the
 CC ability of the clinician to distinguish, e.g., between BPH (benign
 CC prostatic hyperplasia) and prostatic cancer in a patient

 PT Monoclonal antibodies specific for prostate specific antigen - useful,
 PT e.g. in screening for prostate or breast cancer and especially to
 PT distinguish between benign prostatic hyperplasia and prostate cancer.
 XX
 PS Example, Page 59, 84pp; English.
 XX
 CC The present sequence represents a prostate specific antigen (PSA)
 CC peptide. Monoclonal antibodies specific for PSA and hybridomas producing
 CC them have been developed. The antibodies: (a) bind to free PSA; (b) are
 CC monoclonal antibody 365 binding to amino acids 82-87 of free PSA (LQRRFL)
 CC or fragment, and (c) are monoclonal antibodies 10, 11, 16 or 22.2 and
 CC 15.2, 156 or 225 binding to amino acids 139-144 (BSLFLTP) and 55-60
 CC (SLRFPB) respectively of free and bound PSA, or fragments. The antibodies
 CC are useful to detect PSA. For detecting free PSA only, an immunoassay
 CC comprising a solid support with attached labelled monoclonal antibody
 CC specific for free PSA (especially (b)) and a PSA standard can be used. To
 CC detect both free and bound PSA, a second solid support with attached
 CC (differently labelled) monoclonal antibody binding free and bound PSA
 CC (especially selected from (c)) can be used either with, or in place of,
 CC the first solid support. The antibodies are useful in cancer screening,
 CC especially prostate and breast cancer. By obtaining total and free PSA
 CC values, their ratio can be used to separate prostatic cancer (PCA) from

CC benign prostatic hyperplasia (BHP) patients. Measurement of PSA is also
 CC useful after radical prostatectomy, to predict disease persistence. The
 CC antibodies allow evaluation of PSA free/total ratio, enabling separation
 CC of BPH and PCA patients with PSA values 4-10 ng/ml not previously
 CC possible by total PSA testing, avoiding biopsies

PT New composition comprising at least one peptide having allele-specific
 PT binding motifs for HLA, useful for preventing, treating or diagnosing
 PT viral diseases and cancer.

PS Claim 1; Page 52-379; 382pp; English.

CC The invention relates to a composition comprising at least one peptide
 CC having an isolated, prepared epitope selected from any of the sequences
 CC from 30 lists given in the specification. Also disclosed is a method for
 CC inducing a cytotoxic T cell response against a pre-selected antigen in a
 CC patient expressing a specific MHC class I allele by contacting cytotoxic
 CC T cells from the patient with the composition cited above. The
 CC composition comprises an epitope that is joined by an amino acid linker.
 CC The epitope is admixed or joined to a CTL or HTL epitope. The epitope is
 CC bound to an HLA molecule on the antigen-presenting cell, where when an A2
 CC -restricted cytotoxic lymphocyte (CTL) is present, a receptor of the CTL
 CC binds to a complex of the HLA molecule and the epitope. Specifically
 CC claimed are peptides having allele-specific binding motifs for HLA. The
 CC compositions and methods are useful for preventing, treating or
 CC diagnosing viral diseases and cancer. The peptide epitopes are useful as
 CC diagnostic agents for evaluating immune responses, for making antibodies
 CC and for evaluating efficacy of a vaccine. Sequences given in ADW29251-
 CC ADW37745 represent epitopes of the invention as given in Tables 2-31.

 PT Prostate Specific Antigen peptide(s) - useful for diagnosis of prostate
 PT cancer.
 XX
 XX Claim 2; Page 10; 42pp; English.
 XX
 CC AAM0769-84 are synthetic peptides derived from the prostate specific
 CC antigen (PSA) sequence. These peptides are identical to a highly
 CC immunogenic region of PSA, and also comprise one or more amino acids
 CC identical or non-identical to the amino acid sequence of human glandular
 CC kallikrein (hK2). The peptides are used as antigens for the production of
 CC antibodies which are used to detect PSA in a test sample (claimed). This
 CC is useful for diagnosis of prostate cancer. The peptides enable the
 CC production of antisera necessary to determine the amount of total PSA,
 CC free PSA and PSA-AC complex present in a sample and thus improve the
 CC ability of the clinician to distinguish, e.g., between BPH (benign
 CC prostatic hyperplasia) and prostatic cancer in a patient

 PT Epitope-containing fusion proteins used to generate a highly specific
 PT immune responses.
 XX
 XX Example 2; Page 38; 67pp; English.
 XX
 CC This invention describes a novel fusion protein, comprising a heat shock
 CC protein (e.g. ubiquitin), fused to an epitope(s) in a defined manner
 CC which is useful for the stimulation of a highly specific immune response
 CC when administered to an animal. The protein of the invention may be post-
 CC translationally modified (e.g. by the addition of fatty acids to enhance
 CC immunogenicity). The fusion proteins of the invention can be used as
 CC vaccines to induce an immune response. When a T cell epitope is attached,
 CC they can be used for control of viral infections, bacterial infections,
 CC parasitic infection and cancer. The fusion proteins can be used in
 CC pharmaceutical compositions for the treatment of gastrointestinal
 CC diseases, pulmonary infections, respiratory infections, and HIV
 CC infections. The use of ubiquitin as a scaffold is also useful for the
 CC presentation and stimulation of anti-self immune responses, e.g.
 CC generation of anti-gonadotropin releasing hormone antibodies which result
 CC in the suppression of luteinizing hormone and follicle stimulating
 CC hormone. This indirectly suppresses steroidogenesis and gamete maturation
 CC in males and females. This type of anti-self response in humans is useful
 CC in the treatment of prostate cancer and breast cancer. In livestock, the
 CC ability to stimulate an anti-self response provides a simple alternative
 CC to physical castration. Immunocastration of pigs is a better alternative
 CC to physical castration, as it does not result in any of the detrimental
 CC side effects associated with physical castration. Other examples of
 CC diseases and conditions treated with self proteins fused with ubiquitin
 CC are TNF and its epitopes to modulate septic shock, arthritis,
 CC inflammatory bowel disease, Crohn's disease, and ulcerative colitis; Ig
 CC epsilon heavy chain for the control of allergic reactions; chorioidic
 CC gonadotropin for fertility control; and sperm proteins for fertility
 CC control. A further use of the fusion proteins is as part of a vaccine to
 CC enhance growth rate and thereby the final weight of the livestock prior
 CC to shipment to market. In addition, the fusion proteins of the invention
 CC can be used to detect and identify antibodies from experimental samples.
 CC This sequence represents a human prostate specific antigen (PSA) peptide
 CC loop used in the method of the invention

DR Novel binding peptide binding to tannin, anthocyanin and phenolic
 PT compounds, useful for delivering agent to target, and for modifying tea
 PT or wine stain on fabric or surface chosen from ceramic, glasses, wood,
 PT paper, skin, hair and plastic.

XX Claim 1; SEQ ID NO 240; 38pp; English.

CC The invention relates to a novel peptide which binds to tannin,
 CC polyphenolic or anthocyanin compounds. The binding peptide consists
 CC essentially of any one of 316 amino acid sequences of 5-13 amino acids in
 CC length or has at least 70% identity to one of the 316 amino acid
 CC sequences. The binding peptide is useful for delivering an agent to a
 CC target, which involves conjugating the binding peptide to an agent to
 CC form a binding peptide conjugate and exposing a target to the binding
 CC peptide conjugate, where the binding peptide conjugate binds to the
 CC target. An enzymatic composition comprising the binding peptide is useful
 CC for modifying a tea or wine stain on a fabric or a surface, which
 CC involves contacting the surface having tea or wine stain with the
 CC enzymatic composition. The surface is preferably a ceramic surface, hair

CC or skin. The binding peptide is useful for producing enzymatic
 CC compositions for use in detergent or cleaning compositions such as for
 CC removing food stains on fabrics or removing food stains on surfaces such
 CC as ceramic and teeth. The binding peptide is useful in the wine ageing
 CC process, where a tannin compound is targeted at the early stage of wine
 CC fermentation process for reducing or eliminating astringency of tannins
 CC in the wine. The binding conjugate, combined with a bleaching agent is
 CC useful for delivering a bleaching agent to stained teeth for bleaching.
 CC The binding peptide and binding conjugate are useful in personal care
 CC products such as creams, lotions and ointments. The binding peptide is
 CC useful for modifying astringency in skin. This sequence represents a
 CC binding peptide which specifically binds to wine stains on cotton for use
 CC in the stain removal process of the invention.

 PT prophylaxis and treatment of inflammation, cardiovascular, skin and
 PT kidney diseases.

PS Example 1; Page 56; 89pp; English.

XX The present invention relates to peptides (ABR44811-ABR47162 and ABR47164
 CC -ABR47365) derived from the Chemotaxis Inhibitory Protein (CHIPS) from
 CC Staphylococcus aureus. The peptide fragments are useful in the
 CC prophylaxis or treatment of diseases or disorders involving the C5a-
 CC receptor (C5AR) and/or formulated peptide receptor (FPR) or neutrophils,

CC monocytes and endothelial cells or involving acute or chronic
 CC inflammation reactions. The diseases or disorders include cardiovascular
 CC disease, disease of the central nervous system, gastrointestinal
 CC diseases, skin diseases, genitourinary diseases, joint diseases,
 CC respiratory diseases and HIV infection

PT Pharmaceutical composition, with an agent to restrict the expression or
 PT activity of an antigen associated with a tumor, incorporates structured
 PT nucleic acids.

PS Disclosure; SEQ ID NO 378; 353pp; German.

XX The invention relates to a novel pharmaceutical composition, whereby the
 CC composition contains an agent which restricts the expression or activity
 CC of an antigen associated with a tumor and the antigen has a sequence,
 CC coded by a nucleic acid, where the nucleic acid is selected from SEQ ID
 CC NOS: 19-21, 54-57, 1-5, 29, 31-33, 37, 39, 40, 62, 63, 70, 74 or 85-88.
 CC The composition of the invention induces cell death and a reduction of
 CC cell growth, cell membrane damage or secretion of cytokines. The
 CC composition may be useful for the identification of differentially
 CC expressed genes in tumors with combined in silico and wet bench studies.
 CC The current sequence is that of a human tumor-associated antigen lactate
 CC dehydrogenase C (LDHC) MHC class I HLA-B*0702 epitope peptide of the
 CC invention which stimulates cytotoxic T-lymphocytes in vivo.

XX PT immune response for treatment or prevention of viral infection or cancer,
XX or for diagnosis.
XX PS Disclosure, Page 110, 150pp; English.
XX CC The sequence is a specific example of a group of new immunogenic peptides
XX CC having an HLA-A3.2, HLA-A1, HLA-A11 or HLA-A24.1 binding motif. For
XX CC example, the peptides having an HLA-A3.2 binding motif each have 9-10
XX CC residues and contain, from the N-terminus to the C-terminus, (a) a first
XX CC conserved residue selected from L, M, I, V, S, A, T, F, C, G, D and E and
XX CC (b) a second conserved residue of K, R, Y, H or F, where the first and
XX CC second conserved residues are separated by 6-7 residues. The peptides are
XX CC capable of binding selected MHC molecules and inducing an immune
XX CC response. They can be used to treat and/or prevent viral infection and
XX CC cancer, e.g. prostate cancer, lymphoma, hepatitis or AIDS. They can also
XX CC be used to produce antibodies for use as diagnostic or therapeutic
XX CC agents. The peptides can also be used as diagnostic agents

XX PT New immunogenic peptides with HLA binding motif, useful in treatment and
XX PT diagnosis of cancers and viral diseases.
XX PS Claim 1; Page 44; 150pp; English.
XX CC AAY45390 to AAY48214 represent specifically claimed immunogenic peptides
XX CC having a human major histocompatibility complex (MHC) Class I (also known
XX CC as human leukocyte antigen (HLA)) binding motif. The immunogenic peptides
XX CC can bind to a specific HLA allele (i.e. HLA-A subtypes HLA-A2.1, A1, A3.2
XX CC or A24.1 or HLA-B or C) and induce a cytotoxic T cell response against
XX CC the antigen from which the peptide is derived. Cytotoxic T lymphocytes
XX CC (CTLs) which destroy antigen-bearing cells are normally induced by an
XX CC antigen in the form of a peptide fragment bound to a HLA molecule, rather
XX CC than the intact foreign antigen itself, and are particularly important in
XX CC tumour rejection and in fighting viral infections. The peptides are
XX CC therefore useful therapeutically to treat or prevent viral infections and
XX CC cancers in mammals (especially humans) e.g. prostate cancer, hepatitis B
XX CC and C, AIDS, and renal carcinoma. They can be administered as vaccines to
XX CC elicit an immune response in individuals susceptible or otherwise at risk
XX CC of viral infection or cancer, or used to treat chronic or acute
XX CC conditions. They are also useful diagnostically, and can be used to
XX CC induce a cytotoxic T cell response, by contacting a cytotoxic T cell with
XX CC the peptide e.g. to produce CTLs ex vivo for infusion back into a
XX CC patient. The polypeptides encoding the immunogenic peptides are also
XX CC useful therapeutically and for immunisation as above

PT Vaccine compositions comprising human immunodeficiency virus-1 (HIV-1)
PT peptide groups, useful for vaccinating against HIV-1.
XX
XX
PS Claim 32; Page 171; 448pp; English.
XX
XX
CC The present invention describes a composition (I) comprising a prepared
CC human immunodeficiency virus-1 (HIV-1) group comprising an amino acid
CC sequence selected from 51 defined amino acid sequences (ABL25347 to
CC ABP25397). (I) has virucide activity and can be used in vaccines. (I) may
CC be used for immunising subjects against HIV-1 infections. The use of
CC group-based vaccines has several advantages over traditional vaccines,
CC particularly when compared to the use of whole antigens in vaccine
CC compositions. There is evidence that the immune response to whole
CC antigens is directed largely toward variable regions of the antigen,
CC allowing for immune escape due to mutations. The groups for inclusion in
CC an group-based vaccine may be selected from conserved regions of viral or
CC tumour-associated antigens, which therefore reduces the likelihood of
CC escape mutants. Furthermore, immunosuppressive groups that may be present
CC in whole antigens can be avoided with the use of group-based vaccines. An
CC additional advantage of an group-based vaccine approach is the ability to
CC combine selected groups (CTL and HTL), and further, to modify the
CC composition of the groups, achieving, for example, enhanced
CC immunogenicity. Accordingly, the immune response can be modulated, as
CC appropriate, for the target disease. Similar engineering of the response
CC is not possible with traditional approaches. ABP1501 to ABP25412
CC represent peptide sequences used in the exemplification of the present
CC invention. (Updated on 11-SEP-2003 to standardise OS field)

 CC immunological excipient. The HIV vaccine peptides are useful as antigens
 CC for raising anti-HIV immune responses, such as T cell responses, and for
 CC inducing antibodies that react with HIV-1 and impairing viral
 CC multiplication in vivo. These antibodies reduce viral multiplication
 CC during any initial acute infection with HIV-1 and minimise chronic
 CC viraemia or progression leading to AIDS. This is the amino acid sequence
 CC of a human immunodeficiency virus 1 (HIV1) vaccine candidate peptide.

PT New cross-clade HIV candidate peptide that binds a human major histocompatibility complex binding matrix motif or activates T-cells from HIV positive patients, useful for preventing or treating HIV infection.

CC The present invention relates to HIV-1 cross-clade candidate peptides comprising a sequence of about 8-50 amino acids, the sequence having CC complete, sequential sequence identity with a partial HIV-1 amino acid CC sequence that is absolutely conserved across at least 2 clades of HIV-1

The HIV cross-clade candidate peptides possess at least one of the biological properties selected from (i) the ability to bind a human major histocompatibility complex (MHC) binding matrix motif for a human MHC allele, (ii) the ability to bind MHC human leukocyte antigen (HLA) in the T2 in vitro peptide binding assay, and (iii) the ability to activate T-cells from HIV positive patients in at least one in vitro assay. The invention also discloses a pharmaceutical composition comprising the above peptide, and methods for the production and use of the cross-clade peptides. The composition and methods are useful in preventing or treating HIV infection. The present sequence represents a HIV-1 cross-clade candidate peptide.

XX Identifying a candidate polymorphic repeat within a coding sequence, for

PT understanding or creating genetic disease, comprises detecting tandem

PT repeats in a target coding sequence and scoring the repeats for

XX polymorphic probability.

XX Example; Col 12; 588pp; English.

XX The invention discloses a method for identifying a candidate polymorphic

CC repeat within a coding sequence (expressed sequence tag, EST), which

CC comprises detecting tandem repeats in a target coding sequence, scoring

CC the repeats for polymorphic probability and generating a dataset

CC correlating the repeats with polymorphic probability to identify a

CC candidate polymorphic repeat. The computational method (polymorphic

CC marker prediction of ubiquitous simple sequences, POMPOUS, and Rep-X) are

CC useful for identifying and detecting candidate polymorphic repeats in

CC human genes, which can be used to understand, treat or eliminate genetic

CC diseases, predispositions or adverse drug-treatment reactions. Examples

CC of diseases linked to nucleotide repeats are Machado-Joseph, Haw River

CC syndrome, Huntington's disease, fragile-X syndrome, Friedrich's ataxia,

CC myotonic dystrophy, hyperandrogenaemia, spinal and bulbar atrophy and

CC spinocerebellar ataxia. The sequence presented is the translated product

CC of one reading frame of a polymorphic dinucleotide repeat within the 3'

CC terminus of the human sperm acrosomal protein (ACRP) coding sequence

 XX Walk-through mutagenesis of a nucleic acid encoding a polypeptide, useful
 PT for producing mutant polypeptides comprising synthesizing oligonucleotides
 PT comprising a nucleotide sequence for each target region of a prototype
 PT amino acid.
 XX
 PS Example; Fig 6; 40pp; English.
 XX
 CC This invention relates to a novel method of walk-through mutagenesis of a
 CC nucleic acid encoding a polypeptide which comprises synthesizing a
 CC mixture of oligonucleotides comprising a nucleotide sequence for each
 CC target region of a prototype amino acid, where each oligonucleotide
 CC contains, at each sequence position in the target region, a prototype
 CC nucleotide for synthesis of the prototype amino acid, or a predetermined
 CC nucleotide that is required for synthesis of the predetermined amino
 CC acid. The method is useful in producing mutant polypeptides in which the
 CC overall presence of the predetermined amino acid is limited to one or two
 CC positions per mutated polypeptide, leaving the remaining amino acids in
 CC the targeted region intact or as close as possible to the prototype
 CC sequence. The invention was exemplified using the three complementarity
 CC determining regions (CDRs) of the heavy chain of the monoclonal antibody
 CC MCPC 603.

 PT a human Severe Acute Respiratory Syndrome (SARS) virus, useful for
 PT diagnosing and treating SARS.
 PT
 PS Example; SEQ ID NO 2265; 200pp; English.
 XX
 CC The present invention relates to novel human Severe Acute Respiratory
 CC Syndrome (SARS) viral nucleic acid and protein sequences derived from a
 CC hSARS virus having China Center for Type Culture Collection Deposit
 CC Accession No. CCTCC-V200303. The present invention also relates to novel
 CC nucleic acid molecules (I; ADT41483 or ADT41485) encoding a nucleocapsid-
 CC (N) or spike (S)-gene protein of a hSARS virus. Also disclosed are
 CC methods for detecting the presence of a N- or S-gene of the hSARS virus
 CC or of the protein in a biological sample and identifying a subject
 CC infected with the hSARS virus. The hSARS virus, nucleic acid and protein
 CC sequences are useful as vaccines for diagnosing or treating SARS. They
 CC are also useful in clinical and scientific research applications. The
 CC hSARS virus genome (ADT39027) was obtained and the amino acid sequences
 CC of all three reading frames were deduced from the complementary strand.
 CC ADT40120 is the full-length protein encoded by the first reading frame of
 CC the complementary strand and ADT40121-ADT40601 are the peptides from the
 CC first reading frame protein. ADT40602 is the full-length protein encoded
 CC by the second reading frame of the complementary strand and ADT40603-
 CC ADT40976 are the peptides from the second reading frame protein. ADT40977
 CC is the full-length protein encoded by the third reading frame of the
 CC complementary strand and ADT40978-ADT41482 are the peptides from the
 CC third reading frame protein.

 PT New isolated nucleic acid molecule useful for detecting, treating,
 PT ameliorating, or preventing the virus causing severe acute respiratory
 PT syndrome in humans using a real-time quantitative polymerase chain
 reaction assay.
 XX
 XX Example; SEQ ID NO 2265; 183bp; English.
 XX
 CC The invention relates to an isolated nucleic acid molecule consisting
 CC essentially of, and/or hybridizes under stringent conditions to a fully
 CC defined nucleotide sequence of 16-25 base pairs (bp); SEQ ID NO: 2471-
 CC 2476), or its complement. The methods and compositions of the present
 CC invention are useful for the detection of the virus causing Severe Acute
 CC Respiratory Syndrome (SARS) in humans using a real-time quantitative
 CC polymerase chain reaction (PCR) assay. They can also be used in treating,
 CC ameliorating, managing or preventing SARS. This sequence corresponds to a
 CC partial SARS protein sequence from the complementary reading frame 3.

 PT New isolated human severe acute respiratory syndrome (hSARS) virus,
 PT useful as vaccine for diagnosing or treating SARS or in clinical and
 PT scientific research applications.
 XX
 XX Example; SEQ ID NO 2265; 176bp; English.
 XX
 CC The present invention relates to novel human Severe Acute Respiratory
 CC Syndrome (hSARS) viral nucleic acid and protein sequences derived from a
 CC hSARS virus having China Center for Type Culture Collection Deposit
 CC Accession No. CCTCC-V200303. The hSARS virus, nucleic acid and protein
 CC sequences are useful as vaccines for diagnosing or treating SARS. They
 CC are also useful in clinical and scientific research applications. The
 CC hSARS virus genome (ADT36557) was obtained and the amino acid sequences
 CC of all three reading frames were deduced from the complementary strand.
 CC ADT37650 is the full-length protein encoded by the first reading frame of
 CC the complementary strand and ADT37651-ADT38131 are the peptides from the
 CC first reading frame protein. ADT38132 is the full-length protein encoded
 CC by the second reading frame of the complementary strand and ADT38133-
 CC ADT38506 are the peptides from the second reading frame protein. ADT38507
 CC is the full-length protein encoded by the third reading frame of the
 CC complementary strand and ADT38508-ADT39012 are the peptides from the
 CC third reading frame protein.

 DR Composition containing peptide that induces cytotoxic T lymphocyte
 PT response, and helper peptide - can bind to human leucocyte antigen
 PT alleles, used to treat or prevent cancers, parasitic infections and
 PT autoimmune disease.
 XX Claim 11; Page 38; 51pp; English.
 PS AAW85138-283 represent helper T-cell peptides, which can bind to the
 CC human leucocyte antigens (HLA) DR4W4, DR1 and DR7. The peptides are used
 CC in the course of the invention. The specification describes peptides that
 CC that induce a cytotoxic T lymphocyte (CTL) response, and T-helper
 CC peptides, that are used together to generate a CTL response for the
 CC treatment or prevention of viral, fungal, bacterial or parasitic
 CC infections (e.g. hepatitis, acquired immune deficiency syndrome or
 CC malaria) or cancer (e.g. renal or cervical carcinoma, lymphoma, prostate
 CC cancer or condyloma acuminatum). Helper T-cell peptides may be used alone
 CC to induce a helper T cell response, e.g. in cases of autoimmune disease,
 CC allograft rejection, allergy, Lyme disease, hepatitis, post-streptococcal
 CC endocarditis, glomerulonephritis and food hypersensitivity

 DR Vaccine compositions comprising human immunodeficiency virus-1 (HIV-1)
 PT peptide groups, useful for vaccinating against HIV-1.
 XX
 PS Claim 32; Page 374; 448pp; English.
 CC The present invention describes a composition (I) comprising a prepared
 CC human immunodeficiency virus-1 (HIV-1) group comprising an amino acid
 CC sequence selected from 51 defined amino acid sequences (ABL25347 to
 CC ABP25397). (I) has virucide activity and can be used in vaccines. (I) may
 CC be used for immunising subjects against HIV-1 infections. The use of
 CC group-based vaccines has several advantages over traditional vaccines,
 CC particularly when compared to the use of whole antigens in vaccine
 CC compositions. There is evidence that the immune response to whole
 CC antigens is directed largely toward variable regions of the antigen,
 CC allowing for immune escape due to mutations. The groups for inclusion in
 CC an group-based vaccine may be selected from conserved regions of viral or
 CC tumour-associated antigens, which therefore reduces the likelihood of
 CC escape mutants. Furthermore, immunosuppressive groups that may be present
 CC in whole antigens can be avoided with the use of group-based vaccines. An
 CC additional advantage of an group-based vaccine approach is the ability to
 CC combine selected groups (CTL and HTL), and further, to modify the
 CC composition of the groups, achieving, for example, enhanced
 CC immunogenicity. Accordingly, the immune response can be modulated, as
 CC appropriate, for the target disease. Similar engineering of the response
 CC is not possible with traditional approaches. ABP1501 to ABP25412
 CC represent peptide sequences used in the exemplification of the present
 CC invention. (Updated on 11-SEP-2003 to standardise OS field)

 PT Modulating an immune system response to an antigen in a mammal, comprises
 PT administering a particle-free therapeutic comprising a hyaluronic acid
 PT polymer analogue covalently linked to a peptide that comprises a T cell
 PT epitope.
 XX
 PS Disclosure, Page 12, 23pp, English.
 XX
 CC The invention relates to modulating an immune system response to an
 CC antigen in a mammal comprising administering to the mammal a particle-
 CC free therapeutic comprising a hyaluronic acid (HA) polymer analogue
 CC covalently linked to at least one peptide that comprises a T cell epitope
 CC recognised by a major histocompatibility complex molecule of the mammal.
 CC The T cell epitope comprises a sequence of at least about eight amino
 CC acids of the antigen. Also included are a method of improving major
 CC histocompatibility complex (MHC) presentation of a T cell epitope of an
 CC antigen in a mammal (comprising administration of a T cell epitope of an
 CC histocompatibility complex (MHC) Class I molecule and by a CD8+ T cell of
 CC the mammal, or an MHC Class II molecule and a CD4+ T cell of the mammal.
 CC The immune system response comprises a cytotoxic T lymphocyte, a CD4+T
 CC cell, or an antibody that recognises the antigen. The immune system
 CC response to the antigen is increased after administration of the
 CC conjugate, where the antigen is an antigen of a pathogenic agent or a
 CC tumour cell. The immune system response to the antigen is decreased after
 CC administration of the conjugate, where the antigen is an antigen of a
 CC tissue or organ transplanted to the mammal. The composition and methods
 CC are useful for modulating, i.e. enhancing or diminishing, an immune
 CC system response to an antigen in a mammal. The composition is also useful
 CC for improving major histocompatibility complex presentation of a T cell
 CC epitope of an antigen in a mammal. The polymeric hyaluronic acid
 CC conjugates are useful as peptide vaccines against an antigen, a
 CC pathogenic agent such as viral, bacterial, fungal or parasitic protein,
 CC or a tumour cell) in a mammal. The peptide vaccine compositions are
 CC useful for treating or preventing diseases associated with any of the
 CC antigens above e.g. HIV infection, cancer, tuberculosis, hepatitis,
 CC melanoma, breast cancer, Hodgkin's lymphoma and nasopharyngeal carcinoma.
 CC The peptide vaccine compositions of the present invention do not require
 CC additional adjuvants, but still induce a stronger cell-mediated response
 CC than peptide vaccines of the prior art. The present sequence is an HIV-1
 CC derived epitope suitable for the vaccine of the invention.

 PT New composition comprising at least one peptide having allele-specific
 PT binding motifs for HLA, useful for preventing, treating or diagnosing
 PT viral diseases and cancer.
 XX
 PS Claim 1; Page 52-379; 382pp, English.
 XX
 CC The invention relates to a composition comprising at least one peptide
 CC having an isolated, prepared epitope selected from any of the sequences
 CC from 30 lists given in the specification. Also disclosed is a method for
 CC inducing a cytotoxic T cell response against a pre-selected antigen in a
 CC patient expressing a specific MHC class I allele by contacting cytotoxic
 CC T cells from the patient with the composition cited above. The
 CC composition comprises an epitope that is joined by an amino acid linker.
 CC The epitope is admixed or joined to a CTL or HTL epitope. The epitope is
 CC bound to an HLA molecule on the antigen-presenting cell, where when an A2
 CC -restricted cytotoxic lymphocyte (CTL) is present, a receptor of the CTL
 CC binds to a complex of the HLA molecule and the epitope. Specifically
 CC claimed are peptides having allele-specific binding motifs for HLA. The
 CC compositions and methods are useful for preventing, treating or
 CC diagnosing viral diseases and cancer. The peptide epitopes are useful as
 CC diagnostic agents for evaluating immune responses, for making antibodies
 CC and for evaluating efficacy of a vaccine. Sequences given in ADW29251-
 CC ADW37745 represent epitopes of the invention as given in Tables 2-31.

XX
XX The invention relates to the use of at least one set of peptides in the
CC preparation of a medicament for modulating an immune response, where
CC individual peptides of a respective set comprise different portions of an
CC amino acid sequence corresponding to a single polypeptide of interest and
CC display partial sequence identity or similarity to at least one other
CC peptide of the same set of peptides (i.e. they are overlapping). Also
CC included are an antigen-presenting cell which has been contacted with the
CC peptides above and thus presents the peptides, a population of such
CC antigen-presenting cells, a process for producing antigen-presenting
CC cells for modulating an immune response to a polypeptide of interest, a
CC method for producing antigen-specific lymphocytes, a composition
CC comprising at least one set of the peptides (and a carrier and/or
CC diluent), a method for administering an immune response to a polypeptide of
CC interest comprising administering to a patient in need at least one set
CC of the peptides, a method for treatment and/or prophylaxis of a disease
CC or condition associated with the presence of a polypeptide of interest
CC and a composition of matter for modulating an immune response in a
CC subject to a target antigen. The polypeptide of interest is also a
CC disease- or condition-associated polypeptide that is a polypeptide
CC produced by a pathogenic organism or a cancer, and produced by a
CC pathogenic organism selected from yeast, viruses, bacteria, helminths,
CC protozoans and mycoplasmas. The disease- or condition-associated
CC polypeptide is produced by a cancer selected from melanoma, lung cancer,
CC breast cancer, cervical cancer, prostate cancer, colon cancer, pancreatic
CC cancer, stomach cancer, bladder cancer, kidney cancer, post transplant
CC lymphoproliferative disease (PTLD) or Hodgkin's lymphoma. The uncultured
CC antigen-presenting cells or their precursors are useful in the
CC preparation of a medicament for the treatment of a disease or condition
CC in a subject, which disease or condition is associated with the presence
CC of aberrant expression of a target antigen, where the antigen-presenting
CC cells or their precursors have not been subjected to activating
CC conditions but have been contacted with an antigen that corresponds to
CC the target antigen to express a processed or modified form of the antigen
CC for presentation to the subject's immune system. The present sequence is
CC one of a set of overlapping immunogenic peptides derived from an HIV-1
CC protein.

PT New immunogenic composition, useful in eliciting an immune response and
PT in treating human immunodeficiency virus, comprises an HLA class I
PT restricted HIV-1 polypeptide, .

PS Disclosure; SEQ ID NO 32; 18pp; English.

CC This invention relates to novel immunogenic compositions that contain HIV
CC -1 epitopes and represent early targets in a naturally occurring response
CC against HIV-1 infection. Specifically, these epitopes contain a human
CC leukocyte Antigen (HLA) class I restricted HIV-1 peptide that is
CC recognised by cytotoxic T lymphocytes (CTLs). The present invention
CC describes a method of using these peptides to stimulate an HIV-specific
CC immune response, such that these peptide compositions can be used to as
CC highly immunogenic HIV-1 vaccine. Accordingly, these compositions that
CC exhibit immunostimulant and virucidal activities can also be used to
CC treat an HIV-1 infection. This peptide sequence is an HIV-1 peptide
CC epitope of the invention.

PT phenotype in a cotton plant.

PS Disclosure; SEQ ID NO 9; 63pp; English.

The invention relates to a DNA sequence comprising a cotton fibre transcriptional factor and an open reading frame (orf) encoding a protein of interest, operably joined in the direction of transcription, where the transcription factor is selected from the 4-4 and rac1s promoter sequences. Also included are a DNA construct comprising a promoter for transcribing in a plant cell the construct above, a plant cell comprising the construct, a plant comprising the cell, modifying fibre phenotype in a cotton plant (comprising: transforming a plant cell with a DNA comprising a construct for expression of a protein in a pigment biosynthesis pathway, where the construct expresses operably joined components: a transcriptional initiation region functional in cells of the plant tissue; and an open reading frame encoding a protein of interest, and a transcriptional termination region functional in cells of the plant tissue, where the plant tissue comprises a substrate of the protein and growing the plant cell to produce a plant comprising the tissue, where the protein reacts with the substrate to produce the pigment), a recombinant DNA construct comprising a cotton tissue transcriptional sequence appearing as ADC89735 or ADC89731 and an isolated DNA encoding sequence appearing as ADC89737 and ADC89728, being the 4-4 and Rac1s cDNAs. The construct is used in a method for modifying fibre phenotype in a cotton plant. The construct is also used as a molecular probe. The present sequence is probably a transcription factor 4-4 promoter cassette peptide, although the authors do not refer to the sequence explicitly in the specification.

XX
XX New fusion proteins resistant to proteolytic degradation - comprising a
XX core protein with a stabilising polypeptide comprising a peptide sequence
XX containing glycine repeats.
XX
XX Disclosure; Page 73; 120pp; English.
XX
XX Sequences shown in AAW79110 to AAW79125 are obtained by oligomerisation
XX of a selected minimal motif by complementary oligonucleotides. The
XX invention provides a method for increasing the resistance of a core
XX protein to proteolytic degradation that comprises linking or inserting
XX onto or into the core protein a stabilising polypeptide of formula
XX [(Gly $\alpha$ )X(Gly $\beta$ )Y(Gly $\gamma$ )Z] $n$  where Gly $\alpha$ , Gly $\beta$ , Gly $\gamma$  are 1-6 sequential Gly
XX residues and X, Y, Z are Ala, Ser, Val, Ile, Leu, Met, Phe, Pro or Thr
XX and n can be anything between 1-66. X, Y and Z need not be identical from
XX n repeat to n repeat. Alternatively a nucleic acid encoding a stabilising
XX polypeptide can be linked onto or inserted into a nucleic acid encoding a
XX core protein. The fusion proteins of the invention are more resistant to
XX degradation by proteases and, thus, have a longer half-life than the
XX unfused core protein. The products can be used for treating autoimmune
XX diseases, cancer and inflammation. In particular, the core protein may be
XX an Ikappab regulator protein for the treatment of inflammatory bowel
XX disease, or a nitroreductase protein which can activate nitro drugs in
XX enzyme/prodrug therapy to treat cancer or other pathological conditions.
XX The fusion proteins can also be used in diagnostic methods such as in
XX vivo imaging. (Updated on 27-AUG-2003 to correct OS field.)

 PT Composition used for treating microbial infections on mucosal surface
 PT e.g. mouth, vagina, gastrointestinal tract or esophageal tract comprises
 PT targeting group and antimicrobial peptide group.
 XX
 PS Claim 37, SEQ ID NO 29; 44pp; English.
 XX
 CC The invention relates to a composition comprising a targeting group and
 CC an antimicrobial peptide group. The targeting group is coupled to the
 CC antimicrobial peptide group and recognises a target microbial organism.
 CC The composition has an antimicrobial effect on the target microbial
 CC organism. Also included are a method of treating a target microbial
 CC organism infection (by administering the composition), and the targeting
 CC peptide that specifically binds to the microorganism). The targeting
 CC group is coupled to the C-terminus of the antimicrobial peptide moiety,
 CC preferably of novipirin G10. The targeting group and the antimicrobial
 CC peptide group are fused via a peptide linker to form a fusion peptide.
 CC The composition is useful for treating a microbial infection e.g. on the
 CC mucosal surface of the mouth, vagina, gastrointestinal tract or
 CC oesophagel tract, such as S. mutans infection in a mouth, a Candida
 CC albicans infection in the vagina and a gastrointestinal infection
 CC selected from Helicobacter pylori infection, Campylobacter jejuni
 CC infection, Vibrio cholerae infection, Salmonella infection, Shigella
 CC infection and Escherichia coli infection. The present sequence is
 CC bacterial targeting peptide suitable for use in the composition of the
 CC invention.

 PT Use of at least one set of peptides in the preparation of a medicament
 PT for modulating an immune response, and for treating cancer or yeast,
 PT viral, bacterial, protozoal and mycoplasma infections.
 XX
 XX Example 4; SEQ ID NO 201, 645bp; English.
 PS
 XX The invention relates to the use of at least one set of peptides in the
 CC preparation of a medicament for modulating an immune response, where
 CC individual peptides of a respective set comprise different portions of an
 CC amino acid sequence corresponding to a single polypeptide of interest and
 CC display partial sequence identity or similarity to at least one other
 CC peptide of the same set of peptides (i.e. they are overlapping). Also
 CC included are an antigen-presenting cell which has been contacted with the
 CC peptides above and thus presents the peptides, a population of such
 CC antigen-presenting cells, a process for producing antigen-presenting
 CC cells for modulating an immune response to a polypeptide of interest, a
 CC method for producing antigen-specific lymphocytes, a composition
 CC comprising at least one set of the peptides (and a carrier and/or
 CC diluent), a method for modulating an immune response to a polypeptide of
 CC interest comprising administering to a patient in need at least one set
 CC of the peptides, a method for treatment and/or prophylaxis of a disease
 CC or condition associated with the presence of a polypeptide of interest
 CC and a composition of matter for modulating an immune response in a
 CC subject to a target antigen. The polypeptide of interest is also a
 CC disease- or condition-associated polypeptide that is a polypeptide
 CC produced by a pathogenic organism or a cancer, and produced by a
 CC pathogenic organism selected from yeast, viruses, bacteria, helminths,
 CC protozoans and mycoplasmas. The disease- or condition-associated
 CC polypeptide is produced by a cancer selected from melanoma, lung cancer,
 CC breast cancer, cervical cancer, prostate cancer, colon cancer, pancreatic
 CC cancer, stomach cancer, bladder cancer, kidney cancer, post transplant
 CC lymphoproliferative disease (PTLD) or Hodgkin's lymphoma. The uncutured
 CC antigen-presenting cells or their precursors are useful in the
 CC preparation of a medicament for the treatment of a disease or condition
 CC in a subject, which disease or condition is associated with the presence
 CC of aberrant expression of a target antigen, where the antigen-presenting
 CC cells or their precursors have not been subjected to activating
 CC conditions but have been contacted with an antigen that corresponds to
 CC the target antigen to express a processed or modified form of the antigen
 CC for presentation to the subject's immune system. The present sequence is
 CC one of a set of overlapping immunogenic peptides derived from an STV
 CC protein.

 PT Urokinase-type plasminogen activator receptor (UPAR)-targeted adenovirus
 PT vectors having modified hexon HVR5 and HI loops and modified fiber
 PT proteins useful for targeted gene therapy to treat cancer or restenosis.
 PS
 XX Claim 14; Page 69; 128bp; English.
 XX
 CC This sequence represents a ligand epitope for UPAR, and is used as a
 CC targeting sequence. The invention relates to an adenovirus from which at
 CC least a part of the hexon HVR5 or HI loop is replaced with a binding
 CC peptide, or targeting sequence, flanked by connecting amino acid spacers,
 CC to functionally display its binding specificity at the capsid surface.
 CC The invention also relates to a recombinant adenovirus vector where a
 CC binding peptide, or targeting sequence, is connected to the C-terminus of
 CC the fiber by a connecting spacer, or linker, so as to functionally
 CC display its binding specificity at the capsid surface. The adenovirus or
 CC recombinant adenovirus vector can be used to preferentially express a
 CC gene in a target cell, especially a cell that expresses a UPAR. The
 CC targeted adenovirus vector preferably comprises a heterologous gene
 CC encoding a gene for treatment of a tumor or restenosis. The targeted
 CC adenovirus vector is useful for gene therapy treatment of a disease, and
 CC for manufacturing a medicine used in gene therapy treatment of a disease.
 CC The viruses can also be used to inhibit smooth muscle cell proliferation,
 CC to treat peripheral artery diseases, coronary artery diseases, obesity,
 CC neurodegenerative diseases, infections, autoimmune diseases, asthma, HIV,
 CC thrombosis, and diabetes. The viruses are particularly targeted against a
 CC urokinase-type plasminogen activator receptor (UPAR). The adenoviruses
 CC are tropism-modified without adversely impacting productivity of the
 CC vectors. (Updated on 06-AUG-2003 to correct OS field.)

XX	New antagonistic peptide(s) derived from urokinase plasminogen activator	
PT	- have high affinity for urokinase receptor, particularly for treatment	
PT	of tumours.	
PS	Example 2; Page 15; 30pp; German.	
XX	This peptide is used in a method which produces cyclic peptides having a	
CC	nine-membered ring in which at least two of the ring-forming amino acids	
CC	are derived from the 22-28 amino acid region of urokinase plasminogen	
CC	activator (uPA). The peptides may also contain D-form residues. Such	
CC	peptides have the formula X21-X22-X23-X24-X25-X26-X27-X28-X29-(X30)n-(Y)m	
CC	where X21-X30 are amino acids, Y = spacer, m and n are each 0 or 1,	
CC	monomers are linked via N-R1-CO or CO-N-R1, R1 = hydrogen, methyl or	
CC	ethyl groups, with a bridge between X21 and X29. The novel peptides are	
CC	uPA antagonists (they inhibit binding of uPA to its receptor, uPAR) so	
CC	are useful for treating diseases involving unregulated expression of uPA	
CC	or uPAR, especially tumours where they reduce invasiveness, metastasis	
CC	and angiogenesis. They can act more generally wherever inhibition of the	
CC	proteolytic activity of uPA is required, e.g. arthritis, inflammation,	
CC	osteoporosis, retinopathy and also for contraception. They can	
CC	additionally act as targeting vehicles (liposomes or viral vectors) for	
CC	uPAR-expressing cells, e.g. for delivering diagnostic markers or	
CC	therapeutic agents, including nucleic acids for gene therapy. Cyclic and	
CC	D-amino acid containing peptides have better affinity for uPAR than known	
CC	compounds and its derivatives are more resistant to degradation

 PT New peptides that antagonize the urokinase receptor, used for treating
 XX cancer by preventing localized conversion of plasminogen to plasmin.
 XX
 PS Example 1; Page 51; 75pp; English.
 XX
 CC This sequence represents a urokinase receptor (UPAR) antagonist peptide.
 CC The peptide inhibits the binding interaction between human urokinase
 CC plasminogen activator (uPA) and its cell surface receptor (UPAR).
 CC Preventing uPA binding to uPAR, reduces the ability of uPA to convert
 CC plasminogen to plasmin, this results in a reduction of localized
 CC proteolysis caused by plasmin. The peptides of the invention are used to
 CC treat cancer, particularly acute myeloid leukaemia, malignant gliomas and
 CC gastric cancer

 PT Novel composition of matter comprising an Fc domain and pharmacologically
 PT active peptides, useful for treating cancer and autoimmune diseases.
 XX
 PS Claim 39; Page 261; 608pp; English.
 XX
 CC The present invention describes composition of matter (I) comprising an
 CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
 CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each
 CC independently selected from -(L1)-c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-

CC (L2)d-P2-(L3)e-P*3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
 CC P3, and P4 = are each independently sequences of pharmacologically active
 CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
 CC c, d, e, and f = are each independently 0 or 1, provided that at least 1
 CC of a and b is 1. The composition can have cytostatic, antiaesthetic,
 CC thrombolytic and immunosuppressive activities. DNAs, vectors and host
 CC cells from the present invention can be used for producing pharmaceutical
 CC compositions. The compositions are useful for treating cancer, asthma,
 CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
 CC a Fcd domain) can provide a longer half-life or incorporate functions
 CC such as Fc receptor binding, protein A binding, complement fixation, and
 CC possibly placental transfer. AAB69443 to AAB69526 and AAB6955 to
 CC AAB18003 represent nucleotide and amino acid sequences used in the
 CC exemplification of the present invention

 PT Urokinase-type plasminogen activator receptor (UPAR)-targeted adenovirus
 PT vectors having modified hexon HRV5 and HI loops and modified fiber
 PT proteins useful for targeted gene therapy to treat cancer or restenosis.
 XX
 PS Claim 14; Page 69; 128pp; English.
 XX
 CC This sequence represents a ligand epitope for UPAR, and is used as a
 CC targeting sequence. The invention relates to an adenovirus from which at
 CC least a part of the hexon HRV5 or HI loop is replaced with a binding
 CC peptide, or targeting sequence, flanked by connecting amino acid spacers,
 CC to functionally display its binding specificity at the capsid surface.
 CC The invention also relates to a recombinant adenovirus vector where a
 CC binding peptide, or targeting sequence, is connected to the C-terminus of

CC the fiber by a connecting spacer, or linker, so as to functionally
CC display its binding specificity at the capsid surface. The adenovirus or
CC recombinant adenovirus vector can be used to preferentially express a
CC gene in a target cell, especially a cell that expresses a UPAR. The
CC targeted adenovirus vector preferably comprises a heterologous gene
CC encoding a gene for treatment of a tumour or restenosis. The targeted
CC adenovirus vector is useful for gene therapy treatment of a disease, and
CC for manufacturing a medicine used in gene therapy treatment of a disease.
CC The viruses can also be used to inhibit smooth muscle cell proliferation,
CC to treat peripheral artery diseases, coronary artery diseases, obesity,
CC neurodegenerative diseases, infections, autoimmune diseases, asthma, HIV,
CC thrombosis, and diabetes. The viruses are particularly targeted against a
CC urokinase-type plasminogen activator receptor (UPAR). The adenoviruses
CC are tropism-modified without adversely impacting productivity of the
CC vectors. (Updated on 06-AUG-2003 to correct OS field.)

PT context-dependent functional entity, useful for treating e.g. malignant
PT neoplasms.
XX
PS Claim 10, Page 39, 49pp; English.
XX
CC The present invention describes a method of enhancing the efficacy of an
CC agent by coadministering the agent and a context-dependent functional
CC entity. The latter comprises a substructure with thrombogenic potential
CC and a selective recognition domain. This is useful in the treatment of
CC cancer, arthritis, infections, neovascular glaucoma, inflammatory
CC conditions, dermatitis, endometriosis, atherosclerosis, vascular
CC restenosis and conditions associated with granuloma tissues, such as
CC burns and pyogenic granuloma. The present sequence is an example of a
CC recognition domain for use in the invention

DR Novel vehicle-peptide molecule or its multimers useful for treating
PT inflammatory and autoimmune diseases, cancer, rheumatoid arthritis,
PT diabetic retinopathy, obesity, sleep disorders and infertility.
XX
XX Claim 39, Page 57, 176pp; English.
XX
XX The present invention describes a vehicle-peptide molecule (I) or its
CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,
CC cytostatic, antineumatic, antiarthritis, antidiabetic, ophthalmological,
CC antihaemic, anorectic, antifertility, haemostatic, dermatological and
CC neuroprotective activities. (I) can be used as a therapeutic or
CC prophylactic agent as well as for screening purposes. (I) is useful for
CC diagnosing diseases characterised by dysfunction of their associated
CC protein of interest, for identifying normal or abnormal proteins of
CC interest, as a part of diagnostic kit to detect the presence of their
CC proteins of interest in a biological sample. Additionally, (I) is useful
CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,
CC infertility, and neurological degenerative diseases. (I), comprising EPO-
CC mimetic compounds are useful for treating disorders characterised by low
CC red blood cell levels such as anaemia. The TPO-mimetic comprising

CC compounds are useful for treating conditions that involve an existing
CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet
CC deficiency, such as thrombocytopenia, aplastic anemia, metastatic
CC tumor which result in thrombocytopenia, systemic lupus erythematosus,
CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777

XX
XX
PS Claim 1, SEQ ID NO 54; 104pp; English.
XX
XX The invention comprises the amino acid and coding sequence of two
CC proteins (INPIONCH03 and INPIONCH04) which are members of the PKD/REJ
CC family of cation channels. The proteins of the invention are useful for
CC preparing a composition for diagnosing, treating or preventing:
CC cardiovascular disease (e.g. heart arrhythmia and angina), neurological
CC and psychiatric disorders (e.g. Alzheimer's disease and Huntington's
CC disease), diabetes, dermatitis, pulmonary disease, asthma, cystic

CC fibrosis, mucous membrane disorders, COPD, rhinitis, leukaemia, ocular
CC disease, glaucoma, retinopathy, immune disorder, renal disease,
CC polycystic kidney disease, fertility disorders, testosterone-related
CC disorders, cancer, gastrointestinal disorders, developmental disorders,
CC diseases related to muscle tone, including vascular muscle disorders such
CC as migraine, pre-eclampsia, hypertension and cardiac arrhythmia/s; and
CC bladder muscle tone disorders (e.g. urinary incontinence and urinary
CC tract infection). The present amino acid sequence represents an
CC INPIONCH03 polypeptide of the invention.

PT New CDR mimetibody comprising a portion of a heavy or light chain
PT variable region comprising human framework or ligand binding region,
PT useful for preparing a composition for treating e.g., immune,
PT cardiovascular or neurologic disease.
XX
XX
PS Disclosure, SEQ ID NO 894; 97pp; English.
XX
XX This invention relates to novel mammalian CDR mimetibodies, specific
CC portions or variants thereof. Specifically, it refers to an antibody
CC fragment where a protein has been inserted into, or replaces a portion
CC of, one or more CDR regions, such that each CDR mimetibody comprises at
CC least one portion of a heavy chain or light chain variable region, which
CC itself comprises at least one human framework region and at least one
CC ligand binding region (LBR). The present invention describes human
CC mimetibodies, including modified immunoglobulins and cleavage products
CC that can be useful in gene therapy and the generation of transgenic
CC plants and animals. Furthermore, the CDR mimetibody is useful for
CC preparing compositions for modulating, treating or reducing the symptoms
CC of immune, cardiovascular, infectious, malignant and/or neurologic
CC diseases, as well as anaemia. Accordingly, they exhibit immunomodulator,
CC cardiant, antimicrobial, cytostatic and neuroprotective activities. This

CC peptide sequence is an somatostatin mimetic peptide sequence used to make
CC a mimetibody of the invention.

 PT Identifying a peptide combo which corresponds with a family of proteins,
 PT useful for diagnosing a variety of diseases, drug development or in
 PT agriculture, comprises generating peptides by applying a digest on the
 PT family of protein.
 XX
 PS Example; SEQ ID NO 553; 265pp; English.
 XX
 CC The invention relates to a method of identifying a peptide combo which
 CC corresponds with a family of proteins where each of the members of the
 CC peptide combo is derived from a unique protein from the family. The
 CC peptide combo is useful for quantifying specific known splice variants of
 CC one or more particular proteins in a sample, for diagnosing complex
 CC genetic diseases such as cancer, obesity, diabetes, asthma and
 CC inflammation, neuropsychiatric disorders such as depression, for
 CC quantifying one to several hundreds of protein disease markers
 CC simultaneously leading to a more accurate diagnostic sub-classification,
 CC for determining the extent of protein modification in a particular sample
 CC of proteins, for tissue-typing analysis, for prenatal testing to detect
 CC the presence of a congenital disease or for quantitating protein levels
 CC diagnostic of a chromosomal abnormality, for diagnosing immune diseases
 CC or neurological diseases, as biomarkers preclinical drug development,
 CC development of improved animal models, biomarkers related with
 CC toxicology, clinical drug development, guidance marketed drugs,
 CC prognostic or diagnostic disease markers, drug target validation and
 CC selection, monitoring protein splicing, drug lead profiling, pathway
 CC analysis, answering basic disease biology questions, and in the fields of
 CC food and feed, cosmetics, agriculture and animal breeding. The present
 CC sequence represents a peptide from a hedgehog pathway peptide combo.

XX	
PS	Claim 11; Page 520; 772pp; English.
XX	
CC	The invention relates to nucleic acid sequences (AAV64411 to AAVB4633)
CC	encoding human secreted proteins (AAM88534 to AAM88756). The secreted
CC	protein gene sequences are deposited with the ATCC under deposit numbers
CC	ATCC 97979, 97974, 97975, 97976, 97977, 209007, 209008, 209009, 209010,
CC	209011, 209080, 209081, 209082, 209083, 209084, 209085, 209511. Host
CC	cells comprising recombinant vectors containing the nucleic acid
CC	sequences are used for the recombinant production of the secreted
CC	proteins. The polynucleotide and amino acid sequences are useful for are
CC	useful for preventing, treating or ameliorating medical conditions e.g.
CC	by protein or gene therapy. Pathological conditions can be also diagnosed
CC	by determining the amount of the new polypeptides in a sample or by
CC	determining the presence of mutations in the new polynucleotides.
CC	Specific uses are described for each of the polynucleotides, based on
CC	which tissues they are most highly expressed in, and include developing
CC	products for the diagnosis or treatment of cancer, neurodegenerative
CC	disorders, developmental abnormalities and foetal deficiencies, blood
CC	disorders, tumours, leukemias, diseases of the immune system, autoimmune
CC	diseases, hepatic and renal disease, lymphomas, inflammation, allergies,
CC	ischemic shock, Alzheimer's and cognitive disorders, schizophrenia,
CC	restenosis, prostate diseases, obesity, disorders involving osteoclasts
CC	such as osteoporosis, arthritis or malignancies, diseases of testes, lung
CC	or thymus, digestive/endocrine disorders, infections and AIDS. The
CC	polypeptides are also useful for identifying their binding partners. The
CC	present sequence represents human secreted protein (see descriptor line
CC	for gene number and clone identification)

PT Mapping discontinuous/surface antibody epitopes on target protein.
 PT comprises binding antibody that binds to target protein with library of
 PT random peptides, computationally aligning peptide sequences to construct
 PT epitope on target protein.

XX Example 2; Page 22; 40pp; English.

XX The invention relates to mapping (M1) discontinuous epitopes on a target
 CC protein. The method of the invention comprises contacting a solid support
 CC having an antibody capable of binding to the target protein, with a
 CC library of random peptides, where the set of probe peptides bind to
 CC antibody, eluting the set of probe peptides, determining the amino acid
 CC sequence of members of the probe peptides, computationally aligning the
 CC probe peptide sequences to the target protein, and constructing a
 CC discontinuous epitope on the target protein. The solid support comprises
 CC a first protein, and is then contacted with a second protein under
 CC conditions, where the first protein binds to the second protein under
 CC solid support is then contacted with a library of random peptides under
 CC conditions, where a set of probe peptides compete with the second protein
 CC for binding to the first protein, eluting the set of probe peptides,
 CC determining the amino acid sequence of the members of the set of probe
 CC peptides, computationally aligning the amino acid sequences of the
 CC members of the set of probe peptides to the target protein, constructing
 CC the binding site on the protein. A computing device for carrying out
 CC (M1), is also disclosed. The method of the invention is useful for
 CC mapping discontinuous antibody or aptamer epitopes on a target protein.
 CC It is also useful for elucidating the tertiary structure of proteins, and
 CC for providing structural information in antibody imprinting, to reveal
 CC distant segments of primary sequence that are in close spatial proximity
 CC on the native, folded protein. The current sequence represents a
 CC consensus peptide that is mapped onto the surface actin. This peptide is

CC from an example of the invention in which the method of the invention is
 CC validated using actin as a model protein.

XX The generation of cytotoxic T cell lymphocytes epitopes for use in anti-
 PT HIV vaccines.

XX Example 4; Page 69; 383pp; English.

XX The invention relates to identification of cytotoxic T cell lymphocyte
 CC (CTL) epitopes (AAM22116-AAM23484) that generate anti-HIV activity. CTL
 CC are a major protective mechanism against viral diseases. Antibodies may
 CC neutralise extracellular human immunodeficiency virus (HIV) and limit or
 CC prevent infection of cells in the host, but CTL will limit viral
 CC production by killing the cell. The CTL epitopes are useful in medicine,
 CC in the manufacture of vaccines or diagnostic agents

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
